AIMS AND OBJECTIVES

The Mechanical Engineering program at GMIT qualifies students to work as mechanical engineers. Graduates can be deployed in all areas of mineral resources processing in the mining industry. They can also work in other business sectors. Their roles may include research and development, design, and manufacture of products. These products range from small components to large plants, machinery, or vehicles. They can also be involved in installation, final commissioning, and operations.

The application oriented Bachelor degree program “Mechanical Engineering” at GMIT aims at

- equipping students with a strong foundation in fundamental principles not only of general science such as Mathematics, Physics, and Chemistry, but also basic engineering modules such as electrical engineering, engineering management.
- developing communication skills and self-organizing skills through whole curriculum so that they can exchange their ideas and knowledge without a hitch,
- cultivating ability to design mechanical systems, components, or processes utilizing the recent commercial engineering software while considering factors such as safety, sustainability and cost-effectiveness,
- developing analytical skills to identify, formulate, and solve complex engineering problems using scientific and computational methods,
- providing opportunities for hands-on laboratory work, internships, or co-op experiences to apply theoretical knowledge to practical engineering problems and gain real-world insights,
- providing opportunities of exchanging engineering ideas and cultural experiences with foreign students.

The graduates of the “Mechanical Engineering” will be able to

- Apply mathematical, scientific and engineering principles for identifying, formulating, and solving mechanical engineering problems.
- Apply computer-aided design (CAD) software and numerical structural analysis tools, such as Finite Element Method to solve engineering problems in industry.
- Think critically to assess engineering problems and to solve them.
- Apply engineering principles in design, development, and production.
- Recognize the consequences of engineering activities to society, economy, and environment in order to act responsibly.
- Work collaboratively as part of multidisciplinary teams, demonstrating leadership, interpersonal skills, and the ability to contribute positively to team goals while respecting diverse perspectives.

CURRICULUM STRUCTURE

To achieve the aims and objectives of mechanical engineering, the curriculum is structured to educate students 1) first two years- to prepare the foundation knowledge for mechanical engineering. The curriculum for the first two years focuses on scientific modules such as Mathematics, Chemistry, Physics, and Basic Mechanics. Also, soft skills such as communication

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

skills, technical English and German, and scientific writing skills are taught. The curriculum for the third year provides engineering modules to help students build basic engineering knowledge and character. Thus the modules for introductory of mechanical engineering and modules for general engineering are taught. Also professional internship module provides students with opportunities to learn and practice engineering skills in real situation. Finally, the fourth year is dedicated to equipping students with professional knowledge and engineering skills which are to be used for their careers. Bachelor thesis provides research experience to solve an engineering problem and to write a logical engineering document. Especially, the final study project offers students an opportunity to cooperate with students from other engineering fields to solve a real engineering problem.

The students who want to major in mechanical engineering programs should complete the first two years' curriculum successfully with a minimum of 100 credit points. To write a bachelor thesis, a student should earn at least 171 credit point before he or she starts the 7th semester. The total amount of CPs for graduation has to be a minimum 240 CPs.

MODULE DESCRIPTIONS

The description of each module is provided in this document following the Study Plan.

ELECTIVES

Students take a German language module as an elective. Every 3rd and 4th year student can choose professional engineering modules from the other programs as electives. Presupposed for participation and recognition of the elective module is that the required prerequisites of the chosen elective module have already been passed. Furthermore, the adjustment of the lecture times for attendance in the chosen elective modules can only be made by ASA in exceptional cases. The student must choose his/her subjects in such a way that participation in his/her program-related modules is not endangered or restricted.

ENGLISH LANGUAGE REQUIREMENT

Students who do not achieve the minimum required score on the English Placement Test shall be required to satisfy the English C1 proficiency requirement for graduation. This requirement may be fulfilled by successfully completing the GMIT English C1 module and paying the tuition fee equivalent to 3 CPs, or by submitting a valid score from a recognized English language proficiency examination. The English C1 module shall not be counted toward the 240 CPs required for degree completion; however, successful completion shall be recorded in the Diploma Supplement and listed in the Learning Management System (LMS) as a non-credit course (0 credits).

GENERAL ENGINEERING MODULES (1ST – 4TH SEMESTERS)

MATH101 – MATHEMATICS I

Module title	Mathematics I			Module code	MATH101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	6 CP	Workload	180 h	Contact hours	72 h
				Individual study	108 h
Module coordinator	Prof. L. Altangerel			Language	English
Contents	- Basics: logic, sets, functions and number sets (real and complex numbers) - Basic linear algebra: matrices, determinants, systems of linear equations, eigenvalue problems, vector spaces, linear maps - Analysis of functions of a single variable: series and functions, limits and continuity, differentiation and integration				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe and explain basic mathematical topics and methods. 2. Demonstrate and apply the basic principles of linear algebra. 3. Demonstrate and apply the basic concepts of analysis of a single variable. 4. Examine mathematical models to represent and solve simple scientific and engineering problems.

in Mechanical Engineering, incl. Study Plan and Module Handbook

CHEM101 – CHEMISTRY

Module title	Chemistry			Module code	CHEM101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	5 CP	Workload	150 h	Contact hours	60 h
				Individual study	90 h
Module coordinator	J. Bayardulam			Language	English
Contents	The students will be introduced chemistry and familiarized with the basic principles and concepts of organic, inorganic and physical chemistry • Introduction of chemistry • The components of Matter; Atomic theory, • Compounds, Formulas, Names & Mass of compounds • The mole, Determining the formula of unknown compound, Writing and balancing chemical equation • Calculating quantities of reactant & products, Fundamentals of solution stoichiometry. • The nature of light, atomic spectra, The Quantum-Mechanical model of the atom • Electron configuration and Chemical periodicity • Atomic properties and chemical bonds, The ionic bonding model, The covalent bonding model, Bond energy and chemical changes • Gas pressure and its measurement, the Gas laws, rearrangement of the ideal gas law • The types of Intermolecular forces, properties of liquid and solids • Enthalpy, Calorimetry, Stoichiometry of thermochemical equation, Hess's law, Standard enthalpies of reaction • Theories of covalent bonding • Kinetics: The reaction rate, Rate laws, Integrated rate law, Theories of chemical kinetics • Equilibrium: The reaction quotient and equilibrium constant, Expressing equilibria Kc and Kp • Equilibrium: Q & K to determine the reaction direction, Solve the equilibrium problem, Le Chatelier's principle • Acid-Base equilibria: Acids and bases in water, Autoionization of water, pH scale, Bronsted-Lowry theory, Problem solving weak-acid equilibria • Ionic equilibria: Equilibria of acid-base buffers, Acid-base titration curves, Equilibria of slightly soluble ionic compounds • Thermodynamics: Entropy, Free energy and Direction of chemical reaction • Electrochemistry: Redox reaction • Electrochemistry: Voltaic cells, Electrolytic cells, Cell potential, Nernst equation, electrochemical process in batteries, corrosion • Transition elements and their Coordination compounds, Crystal field theory • Introduction to organic chemistry: Alkanes, Cycloalkane, Alkenes, Alkynes • The monomer-polymer: Addition polymer, Condensation polymer, Sugar and polysaccharides, • Nuclear chemistry				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain the atomic structure of chemical elements and chemical bonds of molecules, apply chemical nomenclature to chemical compounds and stoichiometric calculations of the chemical reaction. 2. Use the chemical equilibrium concept in the practical application 3. Interpret the kinetics of chemical reactions and solve kinetics problems. 4. Apply the basic concepts of analytical chemistry in chemical analysis 5. Balance redox reactions, explain the electrochemical reaction, and design and apply electrochemical cells. 6. Apply the acquired basic definitions of thermodynamics in thermodynamic systems. 7. Explain the structure, properties and synthesis of hydrocarbons & and polymers 8. Interpret the basic concepts of nuclear chemistry and solve the nuclear chemical reaction problems. 9. Apply the acquired knowledge, and practice teamwork and presentation skills.

GEOS101 – INTRODUCTION TO GEOSCIENCE

Module title	Introduction to Geoscience			Module code	GEOS101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. G. Gantuya			Language	English
Contents	- Earth Processes Earth's structure; endogenous processes (plutonism, volcanism, metamorphism; plate tectonics); exogenous processes (erosion, sedimentation); determination of rocks using simple aids (hand specimen of magmatic, metamorphic and sedimentary rocks). - Earth Materials Crystal forms, chemical and physical properties of minerals, classification of minerals; systematic mineralogy of selected native elements, hydroxides and halides, silicates, carbonates, oxides and sulphides; applied mineralogy of ore and industrial minerals and gems; environmental properties of minerals; determination of minerals using simple aids. - Earth Resources Origin of, prospecting for, and extraction of mineral raw materials, global distribution of ore deposits, endogenous and exogenous ore forming processes, classification of ore deposit types, plate-tectonic control on ore deposits formation, properties and uses of common ore and industrial minerals, and volume commodities, economic significance of mineral raw materials to the national economy, introduction to economic, technical and ecological aspects of raw materials extraction with respect to the sustainable use of geological resources; determination of ore samples using simple aids (small hand specimen of metallic and non-metallic ores). - Earth's atmosphere Fundamentals of the global atmospheric circulation system, weather and climate parameters; distribution of solar insolation and orbital parameters; its influence on the distribution of climate and ecological zones. Brief climate history of the Earth, climate change, future climate change scenarios.				
Learning outcomes	I. Earth Processes On successful completion of this module, the students should be able to: - Recall the shell structure of the Earth and plate-tectonic processes. - Differentiate between the structures of the Earth's oceanic and continental crust. - Recall the processes of plutonic, volcanic and metamorphic rock formation. - Recognize important rock types and describe their mineral composition and structure. II. Earth Materials On successful completion of this module, the students should be able to: - Identify the crystallographic and physical-chemical properties of minerals. - Classify minerals into crystallographic and chemical classes.				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

	- Identify the salient properties (chemical formula, crystal form, Moh's hardness, density, color, cleavage and fracture) of native elements, hydroxide and halide, silicate, carbonate, oxide and sulphide minerals. - Identify the industrial uses and environmental properties of the metallic and non-metallic ores and gemstones. - Identify important minerals and know their respective chemical formulae. III. Earth Resources On successful completion of this module, the students should be able to: - Classify ore deposits into groups of metallic and non-metallic raw materials and recall the different types of ore deposits. - Recall the processes of endogenous and exogenous ore deposit formation in the context of plate tectonics. - Recall the global distribution of ore deposits of the various raw materials. - Recall the properties and uses of the main ores and industrial minerals and volume commodities. - Recall the economic, technical and ecological aspects of the extraction of raw materials. - Summarize terms measures for the sustainable use of Earth resources in qualitative terms. - Recognize relevant ore samples and describe their mineral composition and structure. IV. Earth's atmosphere On successful completion of this module, the students should be able to: - Identify weather and climate elements - Recognize monitoring tools of weather elements - Recall the fundamentals of the global atmospheric circulation system - Clarify past, current, and future climate scenarios.

PROG101 – ALGORITHMS AND PROGRAMMING

Module title	Algorithms and Programming			Module code	PROG101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Kh. Uyanga			Language	English
Contents	• Introduction of Programming Languages (, history of C programming language, syntax, programming process, structure, executing and debugging); • Programming Methodologies (concepts of algorithm design, flowcharts and pseudo codes, number systems) • Structured language (keywords, identifiers, declarations, operators, constants, variables, data types (integer, floating-point data), library functions) • Control Statement and Expressions (statements (if, if ... else, switch, goto), arithmetic expressions) • Looping (for, while, do while, jumping, break and continue) • Arrays (one, two, multidimensional) and string (variables and functions) • Functions and Program Structure (C: user-defined and system defined; • File Processing, discipline of programming.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Implement a variety of algorithms for searching and sorting, including linear search, binary search, insertion sort, selection sort, merge sort, quicksort, and heap sort. 2. Describe abstract data types used in C/C++ and explain their usage 3. describe commonly used syntactic constructions used in C/C++ 4. Develop programs and application 5. Apply knowledge in major courses and practical 6. Solve problems 7. Work independently

ENSO101 – ENGINEER IN SOCIETY (ETHICS)

Module title	Engineer in Society (Ethics)			Module code	ENSO101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Prof. B. Battsengel			Language	English
Contents	Team teaching: The role of the engineers in the society; focus on science and responsibility.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Differentiate between basic tenets of engineering science, natural science, and the humanities and to recognize the relevance for their profession. 2. Think critically about the role of the engineers in the society. 3. Recognize the ethical responsibility of the engineers in concrete situations and analyze and reflect these problems by using approaches from engineering ethics and argue in. 4. Reflect ethical problems caused by new technological developments, future questions involving technological policies and questions of political shaping and guiding of technological developments while considering their context within society and politics. 5. Think critically about specialist literature on basic tenets of science and the ethics of engineering 6. Express oneself in a differentiated way but yet be clearly understood both in oral and written form questions involving the basic tenets of science and ethics in an interdisciplinary context.

PROJ101 – ENGINEERING PROJECT

Module title	Engineering Project			Module code	PROJ101
Duration	1 week + report	Semester	Fall	Module start	1 st
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Prof. N. Battulga			Language	English
Contents	During the project, students work in small groups on an interdisciplinary assignment. Each student contributes to producing an interdisciplinary solution by working as a team with the resources from their individual disciplinary perspectives. The students of mechanical engineering experience the way an engineer deals with problems, they construct in methodology way and solve complex engineering tasks. The assignment is given out at the beginning of the project. Trained support staff accompanies the groups during the course of the project and encourages the development of social and subject-related skills.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Produce a goal-oriented solution through interdisciplinary teamwork. 2. Comprehend and work on an interdisciplinary assignment using design principles of mechanical engineering. 3. Moderate team processes. 4. Plan, organize and carry out tasks independently. 5. Discuss possible solutions and to reach a decision that is guided by criteria 6. Acquire competence in applying scientific methods and to analyze different problems of a task 7. Present different results to an auditorium and to discuss them respectively 8. Reflect scientific acting and assess its societal consequences.				
Literature	Script				
Form of teaching	Project course (2 UoI)				
Assessment method	Successful participation, group presentation, poster, report				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Passing the module				
Grading system	Pass/ Fail				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

ENGL101 – TECHNICAL ENGLISH

Module title	Technical English			Module code	ENGL101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Robin Charpentier			Language	English
Contents	• General vs Technical English; Latin and Greek Roots • Geotechnology • Properties of Metals • Material Formats • Plastics, Elasticity • Ceramics, Glass, Wood • Precision, Accuracy in Measurements, Safety • MID-TERM EXAM • Process Engineering • Fluid Dynamics, Architectural Drawings/Design • Electricity and Magnetism • Math, Statistics, Graphs, Data Ethics • Invention/Innovation/ Spinoffs • Sustainability; the Circular Economy • Presentation Topic Approval; About Infographics, Poster Sessions • Final Presentations – Poster Session (Infographics)				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Demonstrate understanding of, and properly express/describe STEM – related: abbreviations, root meanings, and definitions of symbols, words, and phrases; graphs and the behavior of lines; equations; and simple technical processes, using appropriate terminology and structures 2. Read short texts on a broad range of STEM – related topics at an intermediate to high-intermediate level, in order to understand some technical details and identify the core meanings, and summarize the information in their own words 3. Follow and grasp the main points in a lecture, including audio-visual material at an intermediate to high-intermediate level, on a broad range of topics in STEM – related fields 4. Effectively communicate both orally and in writing on a broad range of STEM – related topics, in English, using relevant stylistic structures				
Literature	1. Barbara A. Cornelen Campus: English for Mechanical Engineering. B2 Coursebook: Cornelsen; 2011. 2. Supplementary materials related to topics covered				
Form of teaching	Recitation (4 UoI)				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

Assessment method	(70%) = Written final examination (30%) = Active in-class participation (15%); tests, mid-term exam, final oral presentation [poster session] (15%)
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering
Prerequisites for participation	- English at the C1 level in all 4 skills - Have an expressed interest in engineering as their major
Requirements for receiving credit points	- Attendance is recorded for those arriving before the scheduled start time - Students must attend at least 80% of the classes in this to be eligible to sit for the Final Exam - Participation means: volunteering answers; asking and/or responding to questions; paying attention; actively focusing on in-class tasks; turning in assignments on time and with good quality
Grading system	The modes of assessment total 100%

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

INCC101 – INTRODUCTION TO INTERCULTURAL COMMUNICATION AND COMPETENCE

Module title	Introduction to Intercultural Communication and Competence			Module code	INCC101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Robin Charpentier			Language	English
Contents	• Elements and Definitions of Culture • Identity: Scale, Boundaries, Aspirational, Ascriptive • Theories and Models of Culture • Shared vs Unique Aspects of Identity • Cultural Awareness • Communication Types – Identification and Practice • Direct/Indirect Communication in Different Cultures • What do we Need to Know About Them? • Mid-Term Exam • Stereotypes, Prejudice • Conscious/Unconscious Bias • Exploring Communications Approaches - Models • Meyers-Briggs Type Indicators • Cultural Awareness Levels; • Stages of Cultural Adjustment • Case Studies: Analyzing Critical Incidents				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Understand their own cultural background and values, and their importance in dealing successfully with people from other cultures 2. Recognize sensitive cultural particularities, and try to respond to these differences in an appropriate and tactful manner 3. Analyze, post hoc, intercultural incidents that have occurred and develop problem solving strategies for future such cases

TIME101 – TIME MANAGEMENT

Module title	Time Management			Module code	TIME101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	The students will learn time management skills and self-development skills. • Time management for successful school life • Shaping thinking frame • Values & purpose of life • Prioritizing tasks • Systematic management of tasks • Objective management • Reading & study skills for enhancing intelligent capacity				
Learning outcomes	On successful completion of this module, students should be able to: 1. Recognize the need of time management in their life. 2. Identify greatest time wasters and avoid them 3. Apply time management skills for effective school life. 4. Prioritize and organize tasks systematically. 5. Develop and align their long- and short-term objectives along with life-goals. 6. Motivates themselves for study at GMIT. 7. Apply reading and thinking skills for their study.

MATH102 – MATHEMATICS II

Module title	Mathematics II			Module code	MATH102
Duration	1 semester	Semester	Spring	Module start	2 nd
Credit points	8 CP	Workload	240 h	Contact hours	96 h
				Individual study	144 h
Module coordinator	Prof. L. Altangerel			Language	English
Contents	- Series: numerical series, power series, Fourier series and Fourier transform; - Differential calculus of functions of several variables: convergence and continuity, partial derivatives, total differentiability, extreme value problems - Line integrals, integration over regions, surface integrals - Basics of ordinary and partial differential equations: modelling using differential equations, first and second order ordinary differential equations, system of ordinary differential equations, basic concepts of partial differential equations.				
Learning outcomes	On successful completion of this module, the students should be able to: - Demonstrate and apply the basic concepts of series; - Explain and calculate differential and calculus of functions of several variables. Be aware of their connections and potential applications in other fields. - Demonstrate and apply the basic concepts of ordinary and partial differential equations; - Make use of mathematical models to solve complex scientific and engineering problems .

MATS101 – MATERIALS SCIENCE

Module title	Materials Science			Module code	MATS101
Duration	1 semester	Semester	Spring	Module start	2 nd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	R. Nyamdulam			Language	English
Contents	• Introduction to Interatomic bonding Attractive and repulsive forces; Primary bonding, secondary bonding, and Van der Waals bonding • Introduction to Crystal Structures Crystalline and amorphous structures; single crystalline and polycrystalline materials, and crystal systems • Imperfection in Solids Chemical impurity; solid solution, point defect, linear defect, planar defect, volume defect • Mechanical properties Engineering stress, and engineering strain; Hooke’s Law; Destructive, and Non-destructive testing techniques • Thermal behavior Heat capacity; Thermal expansion; Thermal conductivity, thermal shock • Phase Diagrams/ Phase Transformations Various phase regions; Compositions of phases; Binary phase equilibrium; Heat treatment processes; Kinetics of Phase transformation • Structural Materials Organic (Polymers and Composites) and Inorganic (Metals, Ceramics and glasses) materials, and their application • Electrical properties and Electronic Materials Conducting materials, insulators, semiconductors, and their application • Optical properties and Materials • Magnetic properties and Materials • Social and Environmental impact				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe the connection between atomic structure, and identify different types of crystal structures. 2. Describe the impacts of defects at the atomic and microstructure scales 3. Explain thermally activated processes, 4. Explain the significance of the main mechanical properties in relation to component design. 5. Explain the fundamentals of non-destructive testing. 6. Select materials in a responsible manner.				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

	7. recognize and apply the significant properties for mechanically characterizing materials. 8. Explain diffusion processes. 9. Interpret states of phase equilibrium and non-equilibrium, understand the concepts of solid solution and solubility limits, and be able to define microscopic properties using the example of eutectic phase diagram. 10. Explain the qualities and quantifications of mechanical, thermal, electrical, optical, magnetic, and chemical properties.

ENME101 – ENGINEERING MECHANICS I (STATICS)

Module title	Engineering Mechanics I (Statics)			Module code	ENME101
Duration	1 semester	Semester	Spring	Module start	2 nd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	General systems of forces. Equilibrium of rigid body. Reaction forces at structural supports. Moment by forces. Structural analysis of truss, beams, frame structures. Center of mass, area, volume. Virtual work principle. Friction. Stability of column structure.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain the concept of force, moment, and equilibrium state in Statics. 2. Establish equilibrium equations and solve statically determinate structures. 3. Compute support reaction forces in statically determinate systems by means of equilibrium conditions or the principle of virtual work. 4. Compute internal forces in beam and truss structures and discuss the effects of external forces on structures. 5. Use shear force diagram and bending moment diagram to interpret the effect of external forces on structures. 6. Compute the center of mass, volume, and area. 7. Apply Pappus principle to calculate volume and surface area of revolving objects. 8. Classify friction type in simple machines and compute proper friction forces.

CHEM102 – CHEMISTRY LABORATORY

Module title	Chemistry Laboratory			Module code	CHEM102
Duration	1 semester	Semester	Spring	Module-start	2 nd
Credit points	3 CP	Workload	90 h	Contact hours	36 h
				Individual study	54 h
Module coordinator	J. Bayardulam			Language	English
Contents	Selected experiments in the fields of general chemistry, analytical chemistry and electrochemistry: unaided acquisition of knowledge, colloquia and written reports. <u>Laboratory practical work</u> • Properties of matter – boiling point • Reaction of magnesium and calcium with water – hydroxide • Quantitative analysis of oxides and properties of mixture • Formation of salts by reaction of metals with acids • Detection of an acidic reaction with various indicators • Estimation of copper by colorimetric method • Electrolysis of water • Rate of chemical reaction • Electrochemical cell • Observing Chemical Equilibrium • Precipitates and Solubility Rules • Hess's law				
Learning outcomes	On successful completion of this module, the students should be able to: 1. apply simple working procedures in the laboratory. 2. Determine physical and safety-related data for materials, and interpret it in context. 3. use experimental equipment in accordance with the safety regulations, and carry out experiments. 4. work together in small groups. 5. prepare a technical report on an experiment and present the results of the experiment in a suitable form. 6. use technical terms and expressions in English				
Literature	1. Allan BJ. Laboratory Manual for Principles of General Chemistry. 10th ed.: Wiley; 2014. 2. Atkins JL. Chemical Principles. 6th ed.: W.H. Freeman and Company; 2013. 3. Brown L, Holme T. Chemistry for Engineering Students. 2nd ed.: Brooks Cole; 2010.				
Form of teaching	Laboratory (3 UoI)

BAEM101 – INTRODUCTION TO BUSINESS ADMINISTRATION AND ENGINEERING MANAGEMENT

Module title	Introduction to Business Administration and Engineering Management			Module code	BAEM101
Duration	1 semester	Semester	Spring	Module start	2 nd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Ch. Enkhzaya			Language	English
Contents	Students will be introduced to basic principles of business administration. In addition, the module prepares students for courses to come in engineering management. Business administration studies problems within the firm and relates to problems in the fields of production organization, strategy, marketing and logistics, finance and accounting, and information management: 1. History and state of the art of business administration as a discipline (fundamentals, managing, and performing, technology-driven management) 2. Why do firms exist? (causes and goals of firms, the structure of a firm, business environment) 3. How to manage processes, teams and firms? 4. Constitutive decisions 5. Production 6. Basics of marketing and sales 7. Investment and Financing 8. Business Accounting 9. Managerial communication Additionally, the Module should enable the students to understand the specifics of the private sector - function and structure - in Mongolia				
Learning outcomes	On successful completion of this module, the students should be able to: • Remember and understand what is this discipline about. • Describe the boundaries of the discipline towards other disciplines like e.g. macro economy or natural sciences • Explain the principles on which firms exist and make decisions • Identify various fields of the firm's activities • Understand the legal environment in which firms operate • Analyze core functions of firms by breaking them into constituent parts (purchase, production, sales and marketing, HR, operations and controlling, etc.), and by determining how the parts relate to one another • Evaluate the performance of firms according to criteria and standards • Develop or create solutions for general managerial tasks

in Mechanical Engineering, incl. Study Plan and Module Handbook

ENME201 – ENGINEERING MECHANICS II (DYNAMICS)

Module title	Engineering Mechanics II (Dynamics)			Module code	ENME201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	Kinematics of particles and rigid body. Coordinate systems in Dynamics. Physical quantities in various coordinate systems. Projectile motion. Kinetics of particles and rigid bodies. Work and energy of particle and rigid body. Linear momentum and impulse of particle and rigid body. Angular momentum and impulse of rigid body.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe planar and spatial motions of particle and rigid bodies using coordinate systems. 2. Formulate dynamic problems into equation of motion applying the Newton’s law of motion. 3. Calculate acceleration, velocity of moving objects applying work and energy concept. 4. Calculate motion of rigid body applying angular momentum and impulse. 5. Integrate the principles of Dynamics and Statics to formulate engineering problems. 6. Distinguish the difference between linear and angular momentum and impulse theory and solve dynamic problems.				
Literature	1. Gross D, Hauger W, Schröder J, Wolfgang A. Wall, Sanjay Govindjee. Engineering Mechanics 3: Dynamics. 2nd ed.: Springer-Verlag Berlin Heidelberg; 2014. 2. Kraige LG, Meriam JL. Dynamics. 7th ed.: Wiley; 2013.				
Form of teaching	Lecture (2 Uol) Recitation (2 Uol)

STAT201 – INTRODUCTION TO STATISTICS

Module title	Introduction to Statistics			Module code	STAT201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	G. Dorjsundui			Language	English
Contents	The module has two strongly related parts as probability and statistics. The first part covers an introduction to probability and random variables. Topics include distribution functions, binomial, geometric, hypergeometric, and Poisson distributions. The other topics covered are uniform, exponential, normal, gamma and beta distributions; conditional probability; Bayes theorem; joint distributions; law of large numbers; and central limit theorem. The second part offers an in-depth theoretical and practical foundation for statistical methods that are useful in many applications. The goal is to understand the role of statistical thinking in the engineering field				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Have fundamental approaches of probability calculation and conceptual definitions. 2. Set up and work with discrete and continuous random variables. In particular, understand the Bernoulli, binomial, geometric, Poisson distributions, uniform, normal and exponential distributions. 3. Know what expectation and variance mean and be able to compute them and extend the convergence of statistical inference. 4. Explain and interpret the quantitative data as descriptive statistical results including tables and graphs. 5. Understand the difference between probability and likelihood functions, and find the maximum likelihood estimate for a model parameter with basic confidence intervals. 6. Demonstrate null hypothesis significance testing to test the significance of results, and understand and compute the p-value for these tests. 7. Compute and interpret simple linear regression between two variables

THER201 – ENGINEERING THERMODYNAMICS

Module title	Engineering Thermodynamics			Module code	THER201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. B. Battsengel			Language	English
Contents	Fundamental terms of thermodynamics; thermodynamic equilibrium and temperature; different forms of energy (internal energy, heat, work, enthalpy); properties and equations of state for gases and incompressible substances; first law of thermodynamics and energy balances for technical systems; second law of thermodynamics and entropy balances for technical systems; exergy analysis; thermodynamics of phase changes; the Carnot cycle for power generation or refrigeration; energy efficiency and coefficient of performance; cyclic processes for gas turbines, combustion engines, power plants, refrigerators and heat pumps				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain the relationships between thermodynamic properties and the thermodynamic state of a system, and apply them in calculating a thermal system behavior. 2. Distinguish between different types of energy (e.g. work, heat, internal energy and enthalpy) and define them. 3. Analyze technical systems and processes using energy balances and equations of state. 4. Assess energy conversion processes by means of an exergy analysis. 5. Characterize the thermal behavior of gases, liquids and solids, and corresponding phase change processes. 6. Apply this basic knowledge (1.-5.) to examine machines (turbines, pumps etc.) and processes for energy conversion (combustion engines, power plants, refrigerators, heat pumps).

in Mechanical Engineering, incl. Study Plan and Module Handbook

DESN201 – ENGINEERING DESIGN

Module title	Engineering Design			Module code	DESN201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	Drawing letters and numbers. Drawing polygon and ellipse. Isometric projection. Orthographic projection. Perspective projection. Oblique projection. Dimensions. Gears and Cams. Tolerance. Geometric tolerance. Mechanical design concept.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Draw alphabets and numbers following the engineering drawing custom. 2. Draw bisect line, perpendicular line, bisect angle line. 3. Make drawings of objects using isometric projection, orthographic projection, oblique projection, and perspective projection. 4. Interpret drawings of multi-view projection of objects and draw them using isometric projection. 5. Draw cam profile based on the cam drawing. 6. Explain gear parts and calculate gear shape. 7. Interpret and make tolerance drawing and geometric tolerance drawing. 8. Model mechanical drawing of parts.

ELEC201 – INTRODUCTION TO ELECTRICAL ENGINEERING

Module title	Introduction to Electrical Engineering			Module code	ELEC201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. P. Ariunbolor			Language	English
Contents	Electrical charge, electrical current, electrical voltage and power, linear DC circuits, Ohm's law, Kirchhoff rules, ideal and real sources, electrical field, capacitor, electrostatic forces, capacitors in linear networks, magnetic field, Lorentz force, Ohm's law of the magnetic network, Ampere's circuital law, ferromagnetism, induction, self-inductance, inductors in linear networks, basic of electric machines and electric safety and power supply system				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Use electrical quantities and units. 2. Calculate linear DC circuits. 3. Calculate work, power, and energy. 4. Analyze and calculate simple linear AC circuits. 5. Design simple electronic circuits 6. Apply the knowledge of electric safety.				
Literature	1 Theraja BL, Theraja AK. A Textbook of Electrical Technology in SI Units. Volume I: . Basic Electrical Engineering: S Chand & Co Ltd; 1999. 2 Cathey JJ, Nasar SA. Schaum's Outline Series Theory and Problems of Basic . Electrical Engineering: McGraw-Hill; 1983.				
Form of teaching	Lecture (2 UoI) Recitation (2 UoI)				
Assessment method	Written examination (90 min.) and oral examination for documentation and presentation (10-30 min. per each student)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Completion of Mathematics I is recommended				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.

MINE201 – INTRODUCTION TO MINING

Module title	Introduction to Mining			Module code	MINE201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. T. Hollenberg			Language	English
Contents	The course aims to support students in acquiring the knowledge about extraction of raw materials and the influence of the mining industry on the development of resource rich countries through mining, processing and value adding. • Market economics • Prospection and Exploration, Deposit assessment • Ground mechanics • Equipment Selection and Requirements • Mining method selection • Surface Opening and Development • Surface Ore Handling Techniques • Surface Mining Operations and Variations • Underground Development • Underground Ore Handling Techniques • Underground Mining Operations and Variations • Hydraulic and Pipeline Mining • Shallow and Deep Drilling • Mineral processing • Mining and Environment • Community and social issues				
Learning outcomes	Upon successful completion of this module, students will, through assessment activities, show evidence of their ability to: 1. Analyze different raw material deposits and evaluate the economic value. 2. Identify the principles of the technologies and apply selection methods for mining operations. 3. Plan and design mining operations and choose appropriate technologies for given circumstances. 4. Recognize the machines and technologies used in open pit and underground mining. 5. Calculate the main parameters of simple technological chains

ECON201 – INTRODUCTION TO ECONOMICS

Module title	Introduction to Economics			Module code	ECON201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Dr. P. Bolormaa			Language	English
Contents	This module provides: • Introduction: What is economics, Economic Problem • How market works: Demand and Supply, Market Equilibrium, Elasticity, Markets in Action • Firms and Markets: Organizing Production, Output and Costs, Perfect Competition, Monopoly, Monopolistic Competition and Oligopoly • Factor Markets: Markets for factors of production such as labor market and capital market				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain big questions of economics and key ideas that define the economic way of thinking; 2. Describe a competitive market, explain the influences on demand and supply, explain how demand and supply determine market equilibrium. 3. Calculate and explain the factors that influence the elasticities of demand and supply. 4. Explain what a firm is and describe the economic problems that all firms face, describe and distinguish between different types of markets in which firm operates. 5. Explain the relationship between a firm's output and labor employed in the short run, explain the relationship between a firm's output and costs in the short run and derive a firm's short-run cost curves, and explain the relationship between a firm's output and costs in the long run and derive a firm's long-run average. 6. Define perfect competition, monopoly, monopolistic competition and oligopoly, explain how firms make their supply decisions in these markets, and why perfect competition is efficient and why others are inefficient. 7. Explain the link between a factor price and factor income, explain what determines demand, supply, the wage rate, and employment in a competitive labor market, and explain what determines demand, supply, the interest rate, saving, and investment in the capital market.

MEAS201 – MEASUREMENT, INSTRUMENTATION AND CONTROL BASICS

Module title	Measurement, Instrumentation and Control Basics			Module code	MEAS201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. P. Ariunbolor			Language	English
Contents	• Measurement technology: physical significance, measuring arrangement, measurement chain, errors, the main procedures for measuring temperature, pressure, flow and filling levels • Data-processing technology: measuring transducers, measured value boards (hardware), measurement software, processing and analysis programs • Regulator technology: product-integrated regulators, autonomous regulators (industry standard regulators), compact regulator stations, programmable regulator stations • Process control technology: signal/packet-based data transmission, bus systems, transmission paths, coupling stations, engineering stations, software process manager, MES, ERP				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Demonstrate the physical principles of measurement and recognize the process relationships in specific application examples. 2. Describe the digital processing of measurements. 3. Describe the operating method of control and regulating equipment, and set up the parameters of these devices. 4. Assess the options for optimizing automation equipment and evaluate existing automation systems.

in Mechanical Engineering, incl. Study Plan and Module Handbook

	B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering
Prerequisites for participation	Completion of Introduction to Electrical Engineering, Mathematics I and II and Physics recommended.
Requirements for receiving credit points	Passing the module
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

CAD201 – COMPUTER AIDED DESIGN (CAD)

Module title	Computer Aided Design (CAD)			Module code	CAD201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	Development of CAD software. Environment of AutoCAD. Basic drawing commands: line, circle, polygon, etc. Modification commands: copy, move, trim, extends, join, break, array, insert, etc. Text commands. Miscellaneous commands. Dimensions. Geometric tolerance. Hatching. Layers. Blocks. Drawing mechanical parts. Drawing multi-view projections of object. Design mechanical parts.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Draw basic geometrics: line, circle, rectangle, etc. 2. Edit drawings using modification commands. 3. Apply each line style appropriately in drawings. 4. Draw dimensions and modify existing dimensions. 5. Interpret and make general tolerance and geometric tolerance 6. Utilize layers to draw efficiently. 7. Make and save blocks and utilize them in drawing. 8. Criticize mechanical drawings.				
Literature	1. Dix M, Riley P. Discovering AutoCAD. 1st ed.: Pearson; 2015. 2. Lang K. AutoCAD Tutor for Engineering Graphics. 1st ed.: Cengage Learning; 2013.				
Form of teaching	Lecture (1 UoI) Laboratory (3 UoI)				
Assessment method	Drawing using AutoCAD software (30 min) and academic performance				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Completion of Engineering Design recommended.				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.

FLME201 – FLUID MECHANICS

Module title	Fluid Mechanics			Module code	FLME201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. N. Battulga			Language	English
Contents	• Basic concepts in fluid mechanics, such as continuum, velocity field, and vorticity. • Dimensional analysis • Principle of the mass conservation and the Newton's law to describe the fluid motion and solve basic engineering problems. • Fluid motion for inviscid fluids, internal flows (e.g. pipe flows), external flows (airfoils and bluff bodies), and flows with a free surface.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Calculate fluid flow regimes, including laminar vs turbulent flows; boundary layers and velocity profiles; 2. Apply Dimensional Analysis techniques; 3. Compute basic hydrostatics problems involving manometers and submerged surfaces. 4. Demonstrate the concept of continuity, 5. Demonstrate Bernoulli's principle, and apply it in flow measurement (orifice and Venturi meter, Pitot-static tube), and to a variety of problems involving area change and height change. 6. Solve basic problems involving pressure losses through pipes and pipe bends and fittings. 7. Apply Momentum equation and the concept of a control volume. Use the equation to calculate impulse and reaction forces due to the interaction of a fluid stream with objects, and pressure drops.				
Literature	1. Elger DF, Crowe CT , Roberson JA, Williams BC. Engineering Fluid Mechanics. 10th ed.: Wiley; 2012.				
Form of teaching	Lecture (2 UoI) Recitation (2 UoI)				
Assessment method	Written examination (120 min.) and academic performance				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering

RREC201 – RAW MATERIALS AND RECYCLING

Module title	Raw Materials and Recycling			Module code	RREC201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Dr. T. Narangarav			Language	English
Contents	The technical and legal principles will be covered in relation to selected topics in raw material management and recycling: • Legal principles (material-specific and country-specific). • Quantities of waste material and primary raw material. • Raw material prices and recycling costs. • The market for secondary raw materials. • Quality requirements, and basic technical principles. • Examples of recycling processes. • Current legal requirements, and the effects and repercussions upon trade, industry, and local authorities. • Demonstration of various different economic measures for recycling by means of practical examples. Cycles will be considered in the following industrial sectors: iron and steel, non-ferrous metals, mineral raw materials, and wood.				
Learning outcomes	On successful completion of this module, students should be able to: 1. Describe the technical and economic principles of lifecycle economy, recycling, and the identification and remediation of contaminated sites. 2. Explain the technical relationships, the differences between free and regulated markets, and the controlling function of the legal system in recycling, and the remediation of contaminated sites. 3. Apply the gained knowledge by carrying out a piece of independent practical work, and publicly presenting their knowledge and experience of complex technical/economic/legal matters.

SCIM201 – SCIENTIFIC METHODS

Module title	Scientific Methods			Module code	SCIM201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Prof. L. Altangerel			Language	English
Contents	This topic introduces students to the broad quantitative and qualitative approaches to research in the field of education. Students examine the key steps in the process of conducting research including identifying research problems, reviewing the literature, developing research questions, collecting and analyzing data, and reporting and evaluating research. Students are asked to consider the context, nature and purposes of research in selecting a research method. Students are encouraged to integrate their research interest in their learning process. The module aims to • Introduce to a range of approaches to scientific research and relationship to philosophical thinking; • Critically examine the similarities and differences between quantitative and qualitative research works and their effect on research method selection; • Develop an understanding of the key elements of the research process including: research problems, literature, reviews, research questions, collecting and analyzing data as well as reporting and evaluating research				
Learning outcomes	On successful completion of this module, students should be able to: 1. Identify and describe a variety of approaches to research, their similarities and differences, and arguments for and against the use of each approach. 2. Develop an understanding of the key elements of the research process including research problems, literature reviews, research questions, collecting and analyzing data; and reporting and evaluating research. 3. Understand scientific research papers and recognize articles that addresses an area of research from different philosophical perspectives. 4. Identify original contributions to research, to policy and/or management and/or practice. 5. Carry out independently a small-scale research.

in Mechanical Engineering, incl. Study Plan and Module Handbook

HSE201 – HEALTH SAFETY ENVIRONMENT (HSE)

Module title	Health Safety Environment (HSE)			Module code	HSE201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	B. Erdenebaatar			Language	English
Contents	a. Principles of Health/Safety/Environment Management (HSE) History, terminology, basis, duties and quality goals of HSE; overview of national and international law, sustainability model/indicators; principles of complex working systems, cause and effect model, risk reduction model, regional material flow and area management, operational material flow management; health/safety/environmental technology, working environment, organization and human behavior; overview, selected risks and stresses, emissions and immissions; event statistics, environmental auditing, environmental compatibility, environmental declaration, environmental performance assessment, principles of ecological life cycle balancing, principles for constructing and implementing management systems (PDCA cycle) b. Methods for Health/Safety/Environment Management Assessment of HSE effects (basis and methods for form-based assessment, determination and evaluation of risks and stresses, analysis methods); hierarchy of protective measures, key performance indicators (KPIs), ecological book-keeping, estimation of technical consequences, methods for quantifying the environmental relevance of emissions and immissions, audits, continuous improvement process, etc.); prevention, operation with goals, influencing behavior, environmental cost calculation, eco-cost control; Certification of management systems (e.g. EMAS, EN ISO 14001 ff., EN ISO 9001 ff., OHSAS 18001 ff.), integrated management system				
Learning outcomes	On successful completion of this module, students should be able to: 1. Describe the basic scientific principles, methods and instruments for protection of the workplace, health and the environment, and sustainability management, and to apply the requirements of the standards to selected operational examples. 2. List the risks and stress factors and evaluate emissions and immissions. 3. Analyze complex work systems in terms of the causal chain (cause-effect-damage) and select protective measures. 4. Describe the structure, Contents and goals of the main HSE management systems, describe the duties of the technical and managerial personnel in terms of analysis, organization and activities				
Literature	1. Center for the Advancement of Process. Safety, Health & Environment: Prentice Hal; 2009.				
Form of teaching	Lecture (2 Uol) Recitation (1 Uol) Field trip (1 Uol)				
Assessment method	Written examination (90 min.) and academic performance

LAW201 – LAW

Module title	Law			Module code	LAW201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	G. Surakhbayar			Language	English
Contents	This module introduces students to the basics of national and international environmental law. Including: • Overview of Environmental Concepts, Theories, Sources; • Protecting Environmental Objects such as Air, Water, and Wildlife in Mongolia • International Environmental Norms				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe the roles of contemporary theories, concepts, and sources concerning environmental protection. 2. Examine the importance of environmental laws & regulations and its application within the Mongolian court system. 3. Assess interactions between environmental laws & regulations and other domestic laws. 4. Apply environmental rules and norms to specific environmental issues in Mongolia.				
Literature	1. Amarkhuu O. Contemporary Environmental Law of Mongolia; 2013. 2. Percival RV, Schroeder CH, Miller AS, James P. Leape. Environmental Regulation: Law, Science, and Policy. 7th ed.: Wolters Kluwer; 2013. 3. Hunter D, Salzman J, Zaelke D. International Environmental Law and Policy. 4th ed.: Foundation Press; 2010.				
Form of teaching	Lecture (2 UoI)				
Assessment method	Written examination (90 min.) and academic performance.				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.

INTR201 – BASIC INTERNSHIP

Module title	Basic Internship			Module code	INTR201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	2 CP	Workload	120 h	Contact hours	NA
				Individual study	120 h
Module coordinator	Department of Academic and Student Affairs			Language	English
Contents	During the internship, students will be introduced to the social structures in the company, work processes, the relationship between employees, supervisors and executives, and teamwork as well as the responsibility of the individual employee. The Basic Internship helps the students to decide on a major or confirm the decision they have already made.				
Learning outcomes	After taking part in the industrial placement, the student should be able to: 1. Explain the company structure and its work processes. 2. Describe the duties and tasks of positions in the company. 3. Do simple SWAT analysis for the company. 4. Provide a written statement of the activities carried out, an appropriately record their observations and experiences.				
Literature	None				
Form of teaching	Basic internship (6 weeks)				
Assessment method	Written report (min. 10 p.)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Confirmation of participation in the internship, Acceptance of the written report.				
Grading system	Pass / Fail

in Mechanical Engineering, incl. Study Plan and Module Handbook

PROFESSIONAL MODULES (5TH – 8TH SEMESTER)

MECH301 – ENGINEERING MECHANICS III (MECHANICS OF MATERIAL)

Module title	Engineering Mechanics III (Mechanics of Materials)			Module code	MECH301
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Kim Young Suk			Language	English
Contents	Definition of stresses in 2D and 3D representation, Deformation and strain, Hooke's law, Mohr's circle, strength hypotheses, Structural analysis under axial force, bending moment, torsional force, and shear force. Energy principles in structural analysis. Stability and buckling of column members.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe one-, two- and three-dimensional stress states and to identify the corresponding principal stresses. 2. Design beams and shafts on the basis of strength 3. Analyze beam structure under bending moment and shear forces 4. Analyze shaft member under torsional and shear forces and examine stress distribution on cross section. 5. Design simple stability problems and apply Euler's buckling cases.				
Literature	1. Hibbeler RC. Mechanics of Materials, 11 th edition; 2011. 2. Beer FP, Johnston ER, DeWolf JT. Mechanics of Materials, 3 th edition; 2004 .				
Form of teaching	Lecture (2 UoI) Recitation (2 UoI)				
Assessment method	Written examination (120 min.) and academic performance				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Engineering Mechanics I: Statics				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module, accounting for 30%, and the module examinations accounting for 70%				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

MECH302 – PRODUCTION PROCESS TECHNOLOGY

Module title	Production Process Technology			Module code	MECH302
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	6 CP	Workload	180 h	Contact hours	54 h
				Individual study	126 h
Module coordinator	Prof. Kim Young Suk			Language	English
Contents	Basic principles and typical production processes and main process groups (DIN 8580); relationship between design form, material and production processes as the basis for manufacturing technology; details of the main material groups; process development and the basic procedures for component production and assembly in machine-tool and vehicle manufacturing using examples; main factors affecting, and basic principles of, the organization of production for manufacturing and assembling components; principles of geometric production measurement technology, metrological procedures, equipment and test procedures for machine tools.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Systematically compare and evaluate particular production processes under given circumstances. 2. Design customized production processes, allocate resources, and determine the economic parameters (times and costs).

in Mechanical Engineering, incl. Study Plan and Module Handbook

RMPE302 – MINERAL PROCESS ENGINEERING I

Module title	Mineral Process Engineering I + Process Mineralogy			Module code	RMPE302
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	B. Myagmarjav			Language	English
Contents	• Definition and importance of mechanical separation in mineral processing, physical properties of minerals for separation, particle characterization, and particle liberation. • Basic operations in procedural technique: comminution and size separation technologies, basic principles of size classification, principles of crushing technology, devices for classification and comminution. • Principles of sedimentation and solid-liquid separation. • Importance of ore sampling procedure. • Process selection and flowsheet design in mineral processing.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe and explain the importance of mechanical separation, physical properties of minerals, and their effects for separation. 2. Design base enrichment flow sheets. 3. Evaluate mechanical separation results. 4. Determine particle liberation. 5. Evaluate the performance of comminution and classification equipment. 6. Enrichment by size classification.				
Literature	1. AT Mineral Processing Journal. 2. Wills BA. Mineral Processing Technology, 4th edition, Pergamon Pres, Oxford; 1988. 3. Weiss NL. SME Mineral Processing Handbook, New York: Society of Mining Engineers; 1985.				
Form of teaching	Lecture (2 UoI) Recitation (1 UoI) Laboratory (1 UoI)				
Assessment method	Written examination (90 min.) and academic performance.				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering				
Prerequisites for participation	Completion of semester 1-4				
Requirements for receiving credit points	Passing the module				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

Grading system	The final grade consists of the academic performance during the module accounting for 60% and the module examination accounting for 40%.

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

RMPE301 – HEAT AND MASS TRANSFER

Module title	Heat and Mass Transfer			Module code	RMPE301
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. N. Battulga			Language	English
Contents	Steady and non-steady, one- and multi-dimensional heat conduction. Convective heat transport: balance equations for mass, momentum and energy, Nusselt equations. Evaporation and condensation: basic calculations for heat exchangers. Heat transport and heat exchange by radiation. Mass transfer and analogies to heat transfer				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Analyze stationary and transient heat conduction problems, and derive the described differential equations. 2. Solve such equations for simple geometries and boundary conditions. 3. Derive differential equations for convective heat transport problems, and outline the path for their solution. 4. Calculate heat transfer coefficients from the Nusselt equations. 5. Analyze and calculate heat flow in heat exchangers. 6. Describe heat radiation problems. Use the analogy between heat and mass transport for mass transport calculations				
Literature	1. Baehr HD, Stephan K. Heat and mass transfer, Springer, 3 rd . ed. 2011.				
Form of teaching	Lecture (2 UoI) Recitation (2 UoI)				
Assessment method	Written examination (120 min.) and academic performance.				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Mechatronic Engineering B.Sc. Raw Materials and Process Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in Mechanical Engineering, incl. Study Plan and Module Handbook

EEEM302 – MECHATRONICS AND CONTROLLERS

Module title	Mechatronics and Controllers			Module code	EEEM302
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	B. Myagmarjav			Language	English
Contents	• Mechatronics: Basic concepts of mechatronics, control of mechatronic systems; modelling of systems. • Introduction: Concept of PLC, building block of PLC, function of various blocks, limitation of relays, advantage of PLC over electromagnetic relays, different programming languages, PLC manufacturer, working of PLC, basic operation and principles of PLC, architectural details • Instruction Set: Basic instructions like latch, master control self-holding relays, timer instruction like retentive timers, resetting of timers, counter instructions like up counter, resetting of counters. Ladder Diagram Programming : programming based on basic instructions, timer, counter, sequencer, and comparison instructions using ladder program) • Microcontroller series (STF04): Pin details, I/O ports structure, memory organization, special function registers instruction set, addressing modes, timers operation, serial port operation, interrupts • Keil language programming : Assemblers and Compilers, assembler directives, design and interface. Examples like: keypad interface, 7- segment interface, LCD, Stepper motor, A/D, D/A, RTC interface, the introduction of PIC microcontrollers. • Practical projects using PLC training and Microcontroller training, Computer Diagnostics Tools				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Operate and demonstrate microcontroller and PLC-based systems in electrical control circuits for domestic and industrial processes 2. Develop program and develop microcontroller-based systems 3. Apply of PLC and make suitable ladder logic programs for different applications 4. Identify various control system devices and components the performance of various controllers, and control system

MECH303 – ENGINEERING MECHANICS IV

Module title	Engineering Mechanics IV (Machine Elements)			Module code	MECH303
Duration	1 semester	Semester	Spring	Module start	6 th
Credit points	6 CP	Workload	180 h	Contact hours	54 h
				Individual study	126 h
Module coordinator	Prof. N. Odbileg			Language	English
Contents	Machine Design is for engineers a key qualification and responsibility as it integrates and combines basic Engineering Mechanics (<u>where</u> forces are acting, <u>how large</u> these forces are), Materials Science (which materials are suitable to withstand these forces) and also Engineering Design (i.e. the documentation and communication of a design by technical drawings / CAD) into the ability to calculate the dimensions of machine elements, i.e. standard elements or specifically designed components or combinations. The course includes the properties, construction, dimensioning including calculations of (basic) machine elements, especially shafts, joints (form-locked: rivets, pins, bolts etc., force-locked: screws, nuts & bolts etc., material-bonded: welding, brazing, gluing etc.), shaft-hub-joints, springs, bearings (friction bearings, ball bearings etc.), couplings, seals, and gearing mechanisms				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Determine a group of mechanical components (simple machines) is supposed to achieve by looking at the CAD/technical drawing. 2. Decide which standard elements are suitable to perform a set of given tasks and document that decision. Calculate the dimensions of simple mechanical components and combinations to perform a given task (and document the course of these calculations).				
Literature	1. Norton RL. Machine Design: An Integrated Approach, 5 th edition, Pearson; 2016. 2. Shigley JL. Mechanical Engineering Design, 10 th edition, McGraw-Hill Education; 2016.				
Form of teaching	Lecture (2 UoI) Recitation (1 UoI) Laboratory (0.5 UoI) Field Trip (1 UoI)				
Assessment method	Written examination (120 min.) and academic performance.				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Mechatronic Engineering B.Sc. Raw Materials and Process Engineering				
Prerequisites for participation	Engineering Mechanics I and II				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Mechanical Engineering, incl. Study Plan and Module Handbook

EEEJ306 – RENEWABLE ENERGY

Module title	Renewable Energy			Module code	EEEJ306
Duration	1 semester	Semester	Spring	Module start	6 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. P. Ariunbolor			Language	English
Contents	This module introduces students to renewable energy sources, energy generation techniques, and the efficiency of energy usage: • Renewable energy sources (overview of hydropower, wind power, solar energy, geothermal systems and biomass): ecological advantages, challenges for implementation (cost, suitable locations, acceptance, and negative environmental impacts). • Solar Energy: Power Generation with Solar Energy; Solar insolation: Energy sources for photovoltaics, Photovoltaic technologies (Si-wafer based vs. Thin-Film PV), Solar cell materials • Wind power: wind characteristics (velocity distribution, density), power calculation and power curve of a wind turbine, structure of wind turbines (vertical, horizontal) • Hydroelectric power: Rainfall and run-off measurements and plotting of various curves for estimating stream flow and size of reservoir, power plants design, construction and operation of different components of hydro-electric power plants • RETScreen Software: https://www.nrcan.gc.ca/maps-tools-and-publications/tools/modeling-tools/retscreen/7465 Students will have the opportunity to learn the software RETScreen to design PV, Wind and Bioenergy systems. • Efficiency of energy usage in industry, at the municipal and domestic level (e.g. heating/insulation, efficiency of electrical appliances, energy efficiency in the transportation sector).				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain the principles of the technical construction of renewable energy systems (Energy Sources, Solar Photovoltaic, Solar Tracking, Charge Controller and Inverter, Wind Power Systems, Wind Turbine Control, Biomass Technologies, Geothermal Power Generation, Energy from Water, Fuel Cells, Generators), 2. Design of wind- and solar-parks 3. Assess the efficiency of energy production and consumption for typical examples from Mongolia (e.g. thermal power plants, insulation of buildings, transport sector) 4. Apply knowledge about the preconditions for an effective usage of energy system.

MECH304 – HYDRAULIC AND PNEUMATIC DRIVES

Module title	Hydraulic and Pneumatic Drives			Module code	MECH304
Duration	1 semester	Semester	Spring	Module start	6 th
Credit points	4 CP	Workload	120 h	Contact hours	36 h
				Individual study	84 h
Module coordinator	Prof. N. Odbileg			Language	English
Contents	Hydraulic and pneumatic drives and control technology, that is, fluid technology, is used to control or regulate motions or forces in machines, plant systems and vehicles. The module provides an introduction to the physical principles, the methods of construction, and the methods of operation of the main component elements, together with the basic circuits for designing simple mechanical engineering systems.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe and apply the principles of electro-mechanical energy conversion. 2. Describe the key functions of fluid drive systems. 3. Develop and calculate solutions for simple systems. Analyze complex machine controls and evaluate different solution options.				
Literature	1. Paal G. Hydraulic and Pneumatic Systems. 2006. 2. Kumar P. Hydraulic Machines, CRC Press. 2004. 3. Parr A. Hydraulics and Pneumatics, Butterworth-Heinemann. 1999.				
Form of teaching	Lecture (2 UoI) Recitation (1 UoI)				
Assessment method	Written examination (120 min.) and academic performance				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Mechatronic Engineering B.Sc. Energy and Electrical Engineering				
Prerequisites for participation	Fluid Mechanics				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module, accounting for 30%, and the module examinations accounting for 70%				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.

INTR301 – INDUSTRIAL INTERNSHIP + REFLECTION

Module title	Industrial Internship + Reflection			Module code	INTR301
Duration	1 semester	Semester	Spring	Module start	6 th
Credit points	10 CP	Workload	14 weeks internship	Contact hours	
				Individual study	300 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	TBD prior to internship. The Industrial Internship experience provides students with opportunities to explore career interests while applying knowledge and skills learned in the classroom in a work setting. Internship experience also helps students gain a clearer sense of what they still need to learn and provides an opportunity to create professional networks.				
Learning outcomes	After taking part in the industrial placement, the student should be able to: 1. Explain the social side of the work process based on secondary socializing in the business, and describe the business as a social structure. 2. Assess his or her future position and prospects in the business. 3. Provide a written statement of the activities carried out, and appropriately record their observations and experiences. 4. Assess the specialization that he/she will choose for his/her career based on the studies to date, and the overall appreciation that has been gained by exposure to the practical, and in-depth experience of their theoretical knowledge. 5. Describe and evaluate the complex interrelationships between the areas preceding and following the production area. 6. Produce a written record of complex technical relationships and production processes.				
Literature	None				
Form of teaching	Industrial internship (14 weeks)				
Assessment method	Written report (min. 10 p.) and oral presentation (20 min.)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Completion of Basic Internship				
Requirements for receiving credit points	Confirmation of participation in the internship, Acceptance of the written report, participation in the seminar				
Grading system	Pass / Fail				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

MECH401 – ENGINEERING MECHANICS V (DYNAMICS OF MACHINERY)

Module title	Engineering Mechanics V (Vibrations)			Module code	MECH401
Duration	1 semester	Semester	Fall	Module start	7 th
Credit points	6 CP	Workload	180 h	Contact hours	54 h
				Individual study	126 h
Module coordinator	Prof. N. Odbileg			Language	English
Contents	This course comprises the following topics: Part I (TMM): Position and displacement analysis, Velocity analysis, Acceleration analysis, Force analysis Part II (Mechanical Vibrations): Free vibration of Single Degree of Freedom System, Harmonically Excited Vibration of SDF, Free and Forced Vibrations of Two Degree of Freedom System, Vibrations of Multiple Degree of Freedom System. Lab: Alignment, Vibration Measurement, Vibration Analysis				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Calculate positions, velocities, accelerations, and forces of links of mechanisms 2. Recognize and analyze oscillating systems. 3. Calculate system responses with MATLAB. 4. Avoid regions of resonance. 5. Measure shaft alignment 6. Analyze vibration of machines

in Mechanical Engineering, incl. Study Plan and Module Handbook

MECH402 – FINITE ELEMENT METHOD

Module title	Finite Element Method			Module code	MECH402
Duration	1 semester	Semester	Fall	Module start	7 th
Credit points	4CP	Workload	120 h	Contact hours	36 h
				Individual study	84 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	Direct stiffness method. 1-D element: spring and bar. 2-D plane element: triangle and rectangle shape. Iso-parametric element. Analysis of truss and beam structure. Analysis of 2D plane problem. Analysis of temperature distribution. Matlab: basic programming skills. Matlab: program coding of FEM. FE analysis using commercial software.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Solve linear boundary value problems by numerical methods. 2. Apply truss elements, beam elements to solve general grid structures 3. Apply 2-D plane elements to solve 2-D engineering problems. 4. Interpret analysis results and evaluate FE analysis performance. 5. Adjust and refine FE model for more accurate results.				
Literature	1. Peter W. Introduction to computational mechanic, Springer; 2008. 2. Klaus J. Finite-Elemente Method, Springer; 2002. 3. Schäfer M. Computational Engineering-Introduction to Numerical methods, Springer; 1999.				
Form of teaching	Lecture (2 UoI) Laboratory (1 UoI)				
Assessment method	Written examination (120 min.) and academic performance				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Engineering Mechanics I, Introduction to Statistics				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module, accounting for 30%, and the module examinations accounting for 70%				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.

MECH403 – PRODUCTION AND PROCESS SIMULATION

Module title	Production and Process Simulation			Module code	MECH403
Duration	1 semester	Semester	Fall	Module start	7 th
Credit points	4 CP	Workload	120 h	Contact hours	36 h
				Individual study	84 h
Module coordinator	Prof. N. Odbileg			Language	English
Contents	Introduction to main strategies of: • Modelling • Simulation • Application using software tools for industrial processes like manufacturing, mineral processing and mining.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Introduction to system theory: classification, definition of terms, model, simulation. This includes the creation of mathematical models and on the other hand, the application of a simulation technology (computer program) to the industries. 2. Students know the basic system classes of simulations: concentrated dynamic systems, distributed dynamic system, discrete systems and discrete-continuous systems. 3. Module provides basic skills for autonomous solving of simulation for problems. 4. Implementation of the Digital Twin for industrial processes like manufacturing, mineral processing and mining. 5. Layout planning for new and existing factories and plants. 6. Cycle time planning and optimization. 7. Visualization. 8. Data import and export opportunities.				
Literature	1. The literature depends on computer programs (CIROS, Mining and Mineral processing software) chosen, on-line tutorials are available 2. Angermann AM, Beuschel MR, Wolhlfarth U. Matlab – Simulink – Stateflow; 2004. 3. Zeigler BP, Praehofer H, Kim TG. Theory of Modeling and Simulation, 2nd edition Academic Press, San Diego; 2000.				
Form of teaching	Lecture (1 UoI) Laboratory (2 UoI)				
Assessment method	Written examinations (90 min.) and academic performance				
Associated study program	B.Sc. Mechanical Engineering				
Prerequisites for participation	Introduction to Computer Science; Engineering Design; Engineering Thermodynamics CAD; Finite Element Method.				
Requirements for receiving credit points	Passing the module				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

Grading system	The final grade consists of the academic performance during the module, accounting for 30%, and the module examinations accounting for 70%

MECH404 – OPEN PIT EXCAVATION + UNDERGROUND MINING MACHINES

Module title	Open Pit Excavation + Underground Mining Machines			Module code	MECH404
Duration	1 semester	Semester	Fall	Module start	7 th
Credit points	6 CP	Workload	180 h	Contact hours	54 h
				Individual study	126 h
Module coordinator	Prof. T. Hollenberg			Language	English
Contents	Open-cast extraction: continuous excavators, construction, stability and safety in use of: chain-and-bucket excavators and bucket-wheel excavators, surface miners, extraction tools, cutting forces, power calculations, power drives, overload protection, slewing units, undercarriages, cornering, track moving machinery, conveyor bridges, spreaders, bench conveyors; discontinuous excavators, cable and dragline excavators, hydraulic excavators, wheel loaders, combinations with rail-less technology (heavy-duty trucks), bulldozers, lignite-bunker technology; open-cast mining safety with retaining walls. Underground mining of salt, coal, ore deposits, room-and-pillar mining and longwall mining, options for mine safety, structure of a production shaft; shaft hoisting equipment:, hoisting procedures, hoisting cables, charging cables, hoisting frames and skips, special breaking systems, technical requirements in accordance with ISO ICS 73 (Mining and Quarrying); drilling and blasting – bolthole and blasthole drilling machines, mechanical extraction - continuous miner, boom type roadheaders, slit cutters, ripper; rail-less transport: loaders etc., types of belt conveyors; longwall mining (coal): armoured face conveyors (AFC), structural design and sizing, combination AFC with self-advancing shield supports, types of ploughs, plough control, drive technology for plough and AFC, dynamic force effects, load equalization, chain pre-tensioning, shearer loader, cutting and loading behavior, sprinklers, underground development with shearer loaders and roadheaders, monorails, train operation; pneumatic backfill machines; gob backfilling.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe, compare and assess machinery for above-ground extraction and conveyor systems for mineral raw materials (open-cast mining, quarries, gravel pits). 2. Predict the suitability of the machinery for the structure of the raw material under given circumstances. 3. Differentiate between the individual sub-assemblies, drives and machine elements, and describe the way in which they operate together. 4. Categorize underground equipment and explain its operation. 5. Design and size machines and equipment for extraction and transport of raw materials below ground. 6. Select the appropriate equipment for a given task. Assess the performance and identify possible problems of particular combinations of equipment.

MECH405 – VIRTUAL PRODUCT DESIGN

Module title	Virtual Product Design			Module code	MECH405
Duration	1 semester	Semester	Spring	Module start	7 th
Credit points	4 CP	Workload	120 h	Contact hours	36 h
				Individual study	84 h
Module coordinator	Prof. N. Odbileg			Language	English
Contents	Virtual product design is all about designing a product using virtual methods mainly digital without any need of building a physical prototype to validate the form, fit, function and manufacturability of a product.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Design the new product using software and computer programs. 2. Simulate the behavior of the product in the real world. 3. Interpret the results.				
Literature	The literature depends on computer programs (AutoCAD, Inventor, SOLIDWORKS)				
Form of teaching	Lecture (2 UoI) Laboratory (1 UoI)				
Assessment method	Written examination (120 min.) and academic performance				
Associated study program	B.Sc. Mechanical Engineering				
Prerequisites for participation	Engineering Mechanics I and II, Computer Aided Design				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module, accounting for 30%, and the module examinations accounting for 70%				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

STWR401 – SCIENTIFIC WRITING

Module title	Scientific Writing			Module code	STWR401
Duration	1 semester	Semester	Fall	Module start	7 th
Credit points	4 CP	Workload	120 h	Contact hours	24 h
				Individual study	96 h
Module coordinator	Prof. G. Gantuya			Language	English
Contents	This module instructs the basics required for the scientific writing and publishing of project works and bachelor theses, and for producing reasonable presentations for conferences, seminars, etc.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Utilize the principles of scientific writing. 2. Competently recapitulate issues. 3. Carry out literature research. 4. Grasp didactically prepared mediation. 5. Give and assess verbal presentations. 6. Apply moderation techniques.				
Literature	None				
Form of teaching	Recitation (2 UoI)				
Assessment method	Homework, Project work, Presentations				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Passing the module				
Grading system	Pass / Fail				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

MECH406 – CLASSIFIERS AND MIXERS + COARSE COMMUNUTION MACHINES

Module title	Classifiers and Mixers + Coarse Comminution Machines			Module code	MECH406
Duration	1 semester	Semester	Spring	Module start	8 th
Credit points	6 CP	Workload	180 h	Contact hours	60 h
				Individual study	120 h
Module coordinator	Dr. Yanjkhlan (Part-time lecturer)			Language	English
Contents	Construction and design of mixers (e.g. mechanical mixers, pneumatic mixers, fluid mixers, mixing beds) and classifier machines (e.g. static screens, vibrating screens, flip-flow screens, drum screens, static and dynamic classifiers). Construction and design of crushers (e.g. of jaw, barrel, roller, impact and hammer crushers).				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Design the mixer and classifier machines that they have studied, perform the calculations, and construct and assemble their main components. 2. Predict the durability of the machines in relation to the stresses to which they will be subjected. 3. Draw up plans for preventive maintenance. 4. Design, calculate and construct machines and systems for coarse crushing. 5. Apply these machines correctly and predict their fitness for purpose in relation to the loads to which they are subjected.

MECH407 – STRUCTURAL DURABILITY AND SYSTEM RELIABILITY

Module title	Structural Durability and System Reliability			Module code	MECH407
Duration	1 semester	Semester	Fall	Module start	8 th
Credit points	4 CP	Workload	120 h	Contact hours	36 h
				Individual study	84 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	Basic probability concepts. Probability distribution functions for structural reliability analysis. Failure probability. Material fatigue properties. Fatigue test. Fatigue strength. Drawing S-N curve and applications. Stress amplitude counting methods. Basics of Fracture Mechanics. Linear damage accumulation method. Crack propagation prediction. Damage tolerance design method.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Compute failure probability of structure 2. Analyze load and stress-time data. 3. Apply S-N curve to evaluate damage. 4. Compute stress amplitude frequency number from stress data. 5. Calculate remaining life of structure based on S-N curve. 6. Carry out life time assessments for components. 7. Analyze systems with regard to failure modes and effects. 8. Compute crack propagation based on Fracture Mechanics.

Form of teaching	Lecture (2 UoI) Recitation (1 UoI)				
Assessment method	Written examination (120 min.) and academic performance				
Associated study program	B.Sc. Mechanical Engineering				
Prerequisites for participation	Engineering Mechanics III				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module, accounting for 30%, and the module examinations accounting for 70%				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

PROJ401 – FINAL STUDY PROJECT

Module title	Final Study Project			Module code	PROJ401
Duration	1 semester	Semester	Spring	Module start	8 th
Credit points	6 CP	Workload	180 h	Contact hours	54 h
				Individual study	126 h
Module coordinator	Prof. M.Hampe			Language	English
Contents	Students from different engineering disciplines will work as a team on a current research topic. Through the module students will learn and practice: Soft skills to cooperate. Brain storming to find solution. Formulate engineering problem. Problem solving procedures. Application of engineering knowledge for solution. Computation of initial and life cycle cost of system.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Solve a design task with the help of systems engineering. 2. Recognize and specify complex problems occurring in industrial practice. 3. Ascertain and evaluate variants within a team solution. 4. Carry out the main features of an exact time and work schedule team, repeatedly, if necessary. 5. Perform different roles in a team. 6. Represent and assess divergent positions, and develop a problem solution.				
Literature	The literature for this module depends on the project and will be provided by the program coordinators.				
Form of teaching	Project course (3-weeks interdisciplinary project work, and 1-day field trip), supervised by lecturers of all disciplines involved.				
Assessment method	Written report and oral presentation				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade is based on the written report (70%), and based on the academic performance /oral presentations (30%)

in Mechanical Engineering, incl. Study Plan and Module Handbook

THES401 – BACHELOR THESIS + COLLOQUIUM

Module title	Bachelor Thesis + Colloquium			Module code	THES401
Duration	1 semester	Semester	Spring	Module start	8 th
Credit points	12 CP	Workload	360 h	Contact hours	
				Individual study	360 h
Module coordinator	Supervisors			Language	English
Contents	Current research topics from the general research area in Mechanical Engineering.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Solve scientific questions in a structured manner using engineering science methods. 2. Critically differentiate between various solutions. 3. Present their results in written and oral form in a scientifically acceptable manner.				
Literature	Depends on topic.				
Form of teaching	Thesis supervision.				
Assessment method	Written thesis (14 weeks handover deadline) and a colloquium (20 min. presentation followed by discussion)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Possible prerequisites will be prescribed by the individual institute supervising the thesis. At least 171 credit points must have been earned.				
Requirements for receiving credit points	Passing the thesis and the presentation				
Grading system	The final grade for the Bachelor thesis consists of the grade of the thesis and of the grade of the performance in the colloquium with a weighting of 4:1 provided that the thesis grade was rated at least as “passed”.

GENERAL ELECTIVE MODULES

ENSS150 – ENGINEERING SUMMER SCHOOL

Module title	Engineering Summer School			Module code	ENSS150
Duration	2 weeks	Semester	Fall or Spring	Module start	2 nd
Credit points	3 CP	Workload	90 h	Contact hours	60 h
				Individual study	30 h
Module coordinator	Dr. T. Narangarav			Language	English
Contents	Interdisciplinary summer school with reference to GMIT's profile consisting of lab work, excursions, field trips and lectures. The following topics will be covered: • Engineering, especially in the context of the resource industry • Environmental aspects of industrial activities • Mining & industry in Germany • Geology • Intercultural competence & self-organization • Higher education institutions and student life abroad The Summer school is accompanied by social events that enforce intercultural contacts.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain the general function of industrial or scientific processes covered and the interaction of different processes with another. 2. Identify different materials and their properties and explain their uses in the industrial processes observed. 3. Explain the difference between open pit and underground mining and of the difference technology in use. 4. Describe impacts on the environment and health along the added value chain of natural resources. 5. Perform different activities which are part of mining engineering, such as loading, drilling etc. 6. Identify minerals and rocks and explain their properties 7. Identify different periods in German history, to compare with Mongolian history and to evaluate the impact of historical developments on the present 8. Apply presentation skills				
Literature	None				
Form of teaching	Lab work, excursion, field trip, lectures				
Assessment method	Report, presentation on major program points				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

Prerequisites for participation	Open to 1st year students, in exceptional cases, students of other semesters are eligible, selection criteria, e.g. academic performance, motivation, personal qualification
Requirements for receiving credit points	Attendance of all parts of the program and successful completion of module
Grading system	Pass / Fail. Final report and presentation accounting for 50% each.

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in Mechanical Engineering, incl. Study Plan and Module Handbook

ENSS151 – ENGINEERING SUMMER SCHOOL

Module title	Engineering Summer School			Module code	ENSS151
Duration	4 weeks	Semester	Fall or Spring	Module start	4 th
Credit points	3 CP	Workload	90 h	Contact hours	60 h
				Individual study	30 h
Module coordinator	German Professors (TDB)			Language	English
Contents	Interdisciplinary summer school consisting of lectures, recitations, lab works, excursions and intercultural activities. The following topics will be covered: • Introduction to mining safety engineering • Mining & industry in China • Geology • Culture and language • Modern coal mining technology The Summer school is accompanied by social events that enforce intercultural contacts.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Recognize the work process in the mining area and its social and technical aspect. 2. Assess career prospects in the business. 3. Explain the general function of industrial or scientific processes covered and the interaction of different processes with another. 4. Identify different materials and their properties and explain their uses in the industrial processes observed. 5. Explain underground mining and of the difference technology in use. 6. Describe impacts on the environment and health along the added value chain of natural resources. 7. Identify different periods in Chinese history, to compare with Mongolian history and to evaluate the impact of historical developments on the present. 8. Apply skills in writing of reports and essays.				
Literature	None				
Form of teaching	Lab work, excursion, field trip, lectures				
Assessment method	Report, presentation on major program points				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering

EEEM309 – ELECTRIC MACHINES AND DRIVE

Module title	Electric Machines and Drive			Module code	EEEM309
Duration	1 semester	Semester	Spring	Module start	6 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. P. Ariunbolor			Language	English
Contents	Construction and operating mode of - transformer - DC machine/drive - asynchronous machine/drive - synchronous machine/drive Theory of rotating magnetic field Stationary operating behavior of the machines in engine/generator operation Application in drive technology (mains fed / inverter feed).				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Clarify the fundamentals of electrical-mechanical energy conversion 2. Describe and explain the implementation of the basic concepts of Electromagnetic fields and forces in their application to electrical machines 3. Discuss the individual components of electrical machines in their function and explain in their mode of action 4. Design and explain the stationary operating behavior of the three basic types of electrical machines (DC machine, asynchronous machine, synchronous machine) in both generator and engine operation.				
Literature	1. Sul KS. Control of Electric Machine Drive Systems. Wiley-IEEE Press; 2011.				
Form of teaching	Lecture (2 UoI) Laboratory (2 UoI) (Practice)				
Assessment method	Written examination (x min) and academic performance				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Energy & Electrical Engineering B.Sc. Mechatronics Engineering				
Prerequisites for participation	Completion of Introduction to Energy and Electrical Engineering Electronics is required.				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 50% and the module examination accounting for 50%.				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.
in Mechanical Engineering, incl. Study Plan and Module Handbook

LANGUAGE ELECTIVE MODULES

ENGL010 – ENGLISH

Module title	English C1			Module code	ENGL010
Duration	1 semester	Semester	Fall	Module start	BEP, 1 st
Credit points		Workload		Contact hours	96 h
				Individual study	
Module coordinator	Prof. Ch. Gunpilmaa, D. Suvdanchuluun			Language	English
Contents	Grammar Syllabus: Gerund/ infinitive, the present and stative verbs, used to and would, passive, causative, future, conditionals and wishes, inversion, modal verbs, relatives, indirect speech and reporting verbs, articles and punctuation Vocabulary and Topical Syllabus: ambition, career success, pastimes and hobbies, family, media, social problems, technology, science jobs, health problems, school, college, university, advertising, communication				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Express themselves clearly and talk about complex facts in a structured and detailed way. 2. Write correctly to a large degree on a number of complex topics. 3. Follow and grasp different kinds of spoken language, live or broadcast 4. Read with ease complex texts and summarize correctly and concisely written texts and oral presentations in their own words. 5. Deliver a presentation using a clear organized structure, helpful slides, and signposting 6. Integrate their reading, writing, and speaking skills to promote creative thinking and independent learning				
Literature	1. Dooley VEJ, Edwards L. Upstream Advanced C1, Express Publishing; 2005. 2. Evans V, Edwards L, Dooley J. Upstream Advanced C1, Workbook, Express Publishing; 2005.				
Form of teaching	Recitation (14 UoI in BEP, 8 UoI in 1st Semester in B.Sc. Programs)				
Assessment method	(70%) = Final examination (written and oral) (30%) = Short presentations, in-class assignments, quizzes,mid-term exam				
Associated study program	BEP / 1 st Semester of Bachelor programs				
Prerequisites for participation	Participants must have successfully completed level B2 or have a comparable knowledge of English				
Requirements for receiving credit points	• 80% attendance • Academic performance • Final examination : written and oral examination • Students who failed the exam in the first semester may retake the module in the second semester				
Grading system	The modes of assessment total 100%.				

ACA-PO-020-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc.

ENGL150 – ACADEMIC WRITING I

Module title	Academic Writing I			Module code	ENGL150
Duration	1 semester	Semester	Fall and Spring	Module start	1 st , 2 nd , 3 rd , 4 th , 5 th , 6 th
Credit points	3 CP	Workload	90 h	Contact hours	48 h
				Individual study	42 h
Module coordinator	D. Suvdanchuluun			Language	English
Contents	The goal of this module is to offer an introduction to formal writing to the undergraduates which is required in their academic studies at the university. The objectives of the module are to familiarize learners with a formal tone, use of the third-person rather than first-person, focus on the topic, precise word choice on the one part, and to introduce them with a paragraph and essay structures, unity and coherence, outlines, first and second drafts and editing on the other part. The goal and objectives will be achieved by offering the below-mentioned syllabus: • Paragraphs • The five-paragraph essay • Unity within a paragraph and within an essay • Coherence • Brainstorming and making outlines • Drafts and editing • Descriptive essays • Formal emails • CV and motivation or cover letters • Process Analysis Essays • Cause and Effect Essays • Argumentative Essays • Opinion Essays • Reports • Lab report discussions • Reviews				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Recognize, understand and recall the structural components of academic writing at paragraph and essay levels. 2. Identify and apply formal register and tone. 3. Analyze and evaluate different types of academic writing, e.g. essays, reviews and reports. 4. Summarize the main points of academic texts in writing. 5. Organize and present arguments in a logical fashion. 6. Apply cohesive devices. 7. Create their own pieces of academic writing. 8. Critically examine and improve upon their own writing. 9. Apply the skills acquired in the module to their further academic studies

MNGL150 – MONGOLIAN STYLISTICS

Module title	Mongolian Stylistics			Module code	MNGL150
Duration	1 semester	Semester	Fall and Spring	Module start	1 st , 2 nd , 3 rd , 4 th ,
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	D. Suvdanchuluun			Language	English
Contents	Participants will read texts of different genres, discuss text comprehension and analyze how the texts are structured and which stylistic means, grammatical structures and vocabulary are used. Grammar and spelling rules will be revised. Participants will practice text analyses, summaries and, furthermore, apply their knowledge of style, academic vocabulary and grammar to their own text production. Participants will also learn how to express their thoughts in oral speech, e.g. in discussions and presentations.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Comprehend and analyze texts of different genres and recognize their specific characteristics, 2. Write text summaries, 3. Structure their thoughts in a text 4. Write a formal letter, an application and other short texts as well as an essay with correct grammar, spelling and using appropriate stylistic means 5. Give an academic presentation using appropriate language

HIST150 – EUROPEAN HISTORY

Module title	European History			Module code	HIST150
Duration	1 semester	Semester	Fall	Module start	5 th , 7 th
Credit points	3 CP	Workload	90 h	Contact hours	48 h
				Individual study	42 h
Module coordinator	Robin Charpentier			Language	English
Contents	European Pre-History: Themes, Questions in the Study of History - Time and Space Considerations; How and Why we Study History - Stone Age: Paleolithic and Neolithic Early European Civilization: - Early Bronze Age – The Minoans - Archaic Greece - Classical Greek Period - Hellenistic Culture - Central European Late Iron Age Cultures (Hallstatt, La Tène) - City of Rome to Roman Kingdom/Punic Wars - Formation and Expansion of Roman Empire - The Fall of the Roman Empire Mid-Term Exam Late Antiquity/Early Middle Ages - Nomadic Conquests of Western Roman Empire - Eastern Roman Empire and Byzantium - Holy Roman Empire - Age of Vikings - Muslim Conquests - Holy Wars: The Crusades - The Mongol Conquests in its Western Empire and in Eastern Europe; Pax Mongolica				
Learning outcomes	On successful completion of this module, the students should be able to: - Identify factors associated with the major cultural changes that have contributed to and shaped Europeans' distinctive worldview - Compare and contrast these factors with relevant time periods in Mongolian history - Think critically about: the role and presence/absence of original sources; and about the role of spatiality and time in the creation of an historical record.				
Literature	- Duiker WJ, Spielvogel JJ. World History 8th edition; 2016. - Spielvogel JV. Glencoe World History, Glencoe-McGraw Hill. Various primary source materials in photocopy; 2008.

GERL151 – GERMAN A1.1

Module title	Deutsch A1.1/ German A1.1			Module code	GERL151
Duration	1 semester	Semester	Fall	Module start	1 st , 3 rd , 5 th , 7 th
Credit points	3 CP	Workload	90 h	Contact hours	48 h
				Individual study	42 h
Module coordinator	B. Batsuren, B. Bolormaa			Language	German
Contents	Basic knowledge and skills in pronunciation, spelling (alphabet), intonation (word and sentence stress) of the German language. Main topics are first contact, classroom language, languages/ countries/ sights, jobs, living, time, numbers, making appointments, how to find the way in the city and in buildings, means of transport. Grammar problems, e.g. sentence structure (statements and questions), present tense of verbs, past tense of “haben” and “sein”, negation, articles, possessive pronoun, use of prepositions (place/time), cardinal numbers, dative and accusative cases, are introduced and practiced. Basic information about German geography and culture is introduced.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Know the basic principles of pronunciation, intonation, spelling of German. 2. Construct grammatically and semantically correct sentences, produce simple statements and questions in oral communication as well as in writing. 3. Introduce themselves and others and make themselves understood in the classroom. 4. Talk about the geographical location of places and say where people work/study and ask for the way. 5. Describe houses/apartments. 6. Tell the time and make appointments. 7. Apply integrated learning strategies to improve upon their learning independently.

GERL152 – GERMAN A1.2

Module title	Deutsch A1.2/ German A1.2			Module code	GERL152
Duration	1 semester	Semester	Spring	Module start	2 nd , 4 th , 6 th , 8 th
Credit points	3 CP	Workload	90 h	Contact hours	48 h
				Individual study	42 h
Module coordinator	B. Batsuren, B. Bolormaa			Language	German
Contents	Basic knowledge and skills in pronunciation, spelling, grammar and vocabulary of the German language as well as basic aspects of German culture. The main topics include: food/shopping, professions, daily routine/everyday life, holidays, seasons/weather, fashion, the human body/health. Grammar points include: modal verbs, perfect tense, comparison, adjectives, imperative and personal pronouns. In this module A1 (beginner) level is completed.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Pronounce and spell German words and intone sentences correctly. 2. Construct grammatically and semantically correct sentences and make simple statements in oral communication as well as in writing. 3. Understand simple everyday conversation and short and simple oral material. 4. Talk about professions, clothes, the weather, the human body, feelings, food, holidays and daily routines. 5. Give recommendations and write simple letters. 6. Understand weather forecasts, recipes and various other short texts of different genres. 7. Provide basic facts about Germany and German culture. 8. Apply integrated learning strategies to improve upon their learning independently.
