AIMS AND OBJECTIVES

The Environmental Engineering study program aims to equip students with the knowledge and skills necessary to address environmental challenges through the application of engineering principles. The study programs prepare professionals who can develop sustainable solutions to protect and improve the natural environment through innovative engineering solutions.

This study program encompasses a wide variety of different disciplines, e.g. biology, geography, engineering and management. By such an interdisciplinary approach, solutions for today's and tomorrow's global challenges are developed.

Competencies of the Environmental Engineering study program include technical skills, analytical abilities, ethical considerations, and professional behaviors necessary to address complex environmental challenges. Key competencies are:

- Technical skills: Engineering fundamentals, Environmental systems (systems of air, water, soil, waste, and remediation of contaminated sites), Modeling and simulation (proficiency in using software tools and mathematical models to simulate environmental processes), and Laboratory and field methods (skills in conducting laboratory experiments and fieldwork to collect, analyze, and interpret environmental data).
- Analytical and Problem-solving abilities: Data analysis, System integration, and Critical thinking.
- Research skills: ability to design and conduct research studies, analyze results, and draw meaningful solutions and conclusions.
- Sustainability and Environmental conservation: understanding of sustainable development policies and ability to apply them in engineering projects.
- Regulatory and Ethical competence: understanding of environmental laws, regulations, and standards, awareness of ethical issues in environmental engineering and ability to make decisions that reflect professional and ethical standards.
- Global perspective: understanding of global environmental issues and the ability to consider global perspectives in engineering solutions.
- Lifelong learning: continuous improvement, professional development.

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

- Project management and leadership: competence in planning, managing, and executing environmental engineering projects, ability to lead and work effectively in multidisciplinary teams.
- Communication skills: effectively collaborate with stakeholders, convey technical information, and advocate for sustainable practices.

The graduates of the Bachelor of Science degree course “Environmental Engineering” will be able to:

- Apply mathematical, scientific and engineering principles for identifying, formulating, and solving problems of environmental engineering.
- Recognize and analyze complex problems, develop engineering solutions to problems, and realize holistic solutions for them.
- Assess and apply as engineers in design, development, production, distribution and consulting scientific methods in order to foster the progress both of the society and of environmental engineering.
- Apply information science for solving environmental engineering problems.
- Work in international teams in order to solve extensive and interdisciplinary problems.
- Recognize the consequences of engineering activities in order to act responsibly within and for the society, the economy, and the environment.

CURRICULUM STRUCTURE

To achieve the aims and objectives of the environmental engineering, the curriculum is structured to educate students 1) first two years- to prepare the foundation knowledge for environmental engineering. The curriculum for the first two year focuses on scientific modules such as Mathematics, Chemistry, Physics, and Raw Materials & Recycling. Also the soft skills such as communication skills, technical English and German, and Scientific methods are taught. The curriculum for the third year provides engineering modules to help students to build basic engineering knowledge and characters. Thus the modules for introductory of environmental engineering and modules for general engineering are taught. Also professional internship module provides students with opportunities to learn and practice engineering skills in real situation. Finally, the fourth year is dedicated to equip students with professional knowledge and engineering skills which are to be used for their career. Bachelor thesis provides research

experience to solve an engineering problem and to write a logical engineering document. Especially, the final study project offers students an opportunity to cooperate with students from other engineering fields to solve a real engineering problem.

The students who want to major environmental engineering program should complete the first two years' curriculum successfully. To write a bachelor thesis, a student should earn at least 171 credit point before he or she starts the 7th semester. The total amount of CPs for graduation has to be minimum of 240 CPs.

MODULE DESCRIPTIONS

The description of each module is provided in this document following the Study Plan.

ELECTIVES

Students take the German language module as an elective. Every 3rd and 4th year student can choose professional engineering modules from the other programs as electives. Presupposed for participation and recognition of the elective module is that the required prerequisites of the chosen elective module have already been passed. Furthermore, the adjustment of the lecture times for attendance in the chosen elective modules can only be made by ASA in exceptional cases. The student must choose his/her subjects in such a way that participation in his/her program-related modules is not endangered or restricted.

ENGLISH LANGUAGE REQUIREMENT

Students who do not achieve the minimum required score on the English Placement Test shall be required to satisfy the English C1 proficiency requirement for graduation. This requirement may be fulfilled by successfully completing the GMIT English C1 module and paying the tuition fee equivalent to 3 CPs, or by submitting a valid score from a recognized English language proficiency examination. The English C1 module shall not be counted toward the 240 CPs required for degree completion; however, successful completion shall be recorded in the Diploma Supplement and listed in the Learning Management System (LMS) as a non-credit course (0 credits).

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

GENERAL ENGINEERING MODULES (1ST – 4TH SEMESTERS)

MATH101 – MATHEMATICS I

Module title	Mathematics I			Module code	MATH101
Duration	1 semester	Semester	Fall Semester	Module start	1 st
Credit points	6 CP	Workload	180 h	Contact hours	72 h
				Individual study	108 h
Module coordinator	Prof. L. Altangerel			Language	English
Contents	- Basics: logic, sets, functions and number sets (real and complex numbers) - Basic linear algebra: matrices, determinants, systems of linear equations, eigenvalue problems, vector spaces, linear maps - Analysis of functions of a single variable: series and functions, limits and continuity, differentiation and integration				
Learning outcomes	On successful completion of this module, the students should be able to: - Describe and explain basic mathematical topics and methods. - Demonstrate and apply the basic principles of linear algebra. - Demonstrate and apply the basic concepts of analysis of a single variable. - Examine mathematical models to represent and solve simple scientific and engineering problems.				
Literature	- Stewart J, Clegg D, Watson S. Calculus Early Transcendentals. 9th ed. Boston: Cengage Learning; 2019. - Thomas GB, Hass JR, Heil C, Weir MD. Thomas' CALCULUS Early Transcendentals. 14th ed. Boston: Pearson; 2018.. - Anton H, Rorres C. Elementary Linear Algebra: Applications Version. 11th ed.: Wiley; 2013 - Rosen KH. Discrete Mathematics and Its Applications. 7th ed. New York: McGraw-Hill; 2012.				
Form of teaching	Lecture (3 UoI) Recitation (3 UoI)				
Assessment method	Written examination (90 min.) and academic performance				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

Requirements for receiving credit points	Passing the module
Grading system	The final grade consists of the academic performance during the module accounting for 70% and the module examination accounting for 30%.

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

CHEM101 – CHEMISTRY

Module title	Chemistry			Module code	CHEM101
Duration	1 semester	Semester	Fall Semester	Module start	1 st
Credit points	5 CP	Workload	150 h	Contact hours	60 h
				Individual study	90 h
Module coordinator	J. Bayardulam			Language	English
Contents		The students will be introduced chemistry and familiarized with the basic principles and concepts of organic, inorganic and physical chemistry			
		1. Introduction of chemistry 2. The components of Matter; Atomic theory, 3. Compounds, Formulas, Names & Mass of compounds 4. The mole, Determining the formula of unknown compound, Writing and balancing chemical equation 5. Calculating quantities of reactant & products, Fundamentals of solution stoichiometry. 6. The nature of light, atomic spectra, The Quantum-Mechanical model of the atom 7. Electron configuration and Chemical periodicity 8. Atomic properties and chemical bonds, The ionic bonding model, The covalent bonding model, Bond energy and chemical changes 9. Gas pressure and its measurement, the Gas laws, rearrangement of the ideal gas law 10. The types of Intermolecular forces, properties of liquid and solids 11. Enthalpy, Calorimetry, Stoichiometry of thermochemical equation, Hess's law, Standard enthalpies of reaction 12. Theories of covalent bonding 13. Kinetics: The reaction rate, Rate laws, Integrated rate law, Theories of chemical kinetics 14. Equilibrium: The reaction quotient and equilibrium constant, Expressing equilibria Kc and Kp 15. Equilibrium: Q & K to determine the reaction direction, Solve the equilibrium problem, Le Chatelier's principle 16. Acid-Base equilibria: Acids and bases in water, Autoionization of water, pH scale, Bronsted-Lowry theory, Problem solving weak-acid equilibria 17. Ionic equilibria: Equilibria of acid-base buffers, Acid-base titration curves, Equilibria of slightly soluble ionic compounds 18. Thermodynamics: Entropy, Free energy and Direction of chemical reaction 19. Electrochemistry: Redox reaction 20. Electrochemistry: Voltaic cells, Electrolytic cells, Cell potential, Nernst equation, electrochemical process in batteries, corrosion 21. Transition elements and their Coordination compounds, Crystal field theory 22. Introduction to organic chemistry: Alkanes, Cycloalkane, Alkenes, Alkynes 23. The monomer-polymer: Addition polymer, Condensation polymer, Sugar and polysaccharides, 24. Nuclear chemistry			

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain the atomic structure of chemical elements and chemical bonds of molecules, apply chemical nomenclature to chemical compounds and stoichiometric calculations of the chemical reaction. 2. Use the chemical equilibrium concept in the practical application 3. Interpret the kinetics of chemical reactions and solve kinetics problems. 4. Apply the basic concepts of analytical chemistry in chemical analysis 5. Balance redox reactions, explain the electrochemical reaction, and design and apply electrochemical cells. 6. Apply the acquired basic definitions of thermodynamics in thermodynamic systems. 7. Explain the structure, properties and synthesis of hydrocarbons & and polymers 8. Interpret the basic concepts of nuclear chemistry and solve the nuclear chemical reaction problems. 9. Apply the acquired knowledge, and practice teamwork and presentation skills.

Form of teaching	Lecture (3 UoI) Recitation (2 UoI)
Assessment methods	Written examination (120 min.) and academic performance for lecture and recitation
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy & Electrical Engineering B.Sc. Mechatronic Engineering
Prerequisites for participation	None
Requirements for receiving credit points	Passing the module
Grading system	The grade of chemistry consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

GEOS101 – INTRODUCTION TO GEOSCIENCE

Module title	Introduction to Geoscience			Module code	GEOS101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. G. Gantuya			Language	English
Contents	• Earth Processes Earth's structure; endogenous processes (plutonism, volcanism, metamorphism; plate tectonics); exogenous processes (erosion, sedimentation); determination of rocks using simple aids (hand specimen of magmatic, metamorphic and sedimentary rocks). • Earth Materials Crystal forms, chemical and physical properties of minerals, classification of minerals; systematic mineralogy of selected native elements, hydroxides and halides, silicates, carbonates, oxides and sulphides; applied mineralogy of ore and industrial minerals and gems; environmental properties of minerals; determination of minerals using simple aids. • Earth Resources Origin of, prospecting for, and extraction of mineral raw materials, global distribution of ore deposits, endogenous and exogenous ore forming processes, classification of ore deposit types, plate-tectonic control on ore deposits formation, properties and uses of common ore and industrial minerals, and volume commodities, economic significance of mineral raw materials to the national economy, introduction to economic, technical and ecological aspects of raw materials extraction with respect to the sustainable use of geological resources; determination of ore samples using simple aids (small hand specimen of metallic and non-metallic ores). • Earth's atmosphere Fundamentals of the global atmospheric circulation system, weather and climate parameters; distribution of solar insolation and orbital parameters; its influence on the distribution of climate and ecological zones. Brief climate history of the Earth, climate change, future climate change scenarios.				
Learning outcomes	I. Earth Processes On successful completion of this module, the students should be able to: 1. Recall the shell structure of the Earth and plate-tectonic processes. 2. Differentiate between the structures of the Earth's oceanic and continental crust. 3. Recall the processes of plutonic, volcanic and metamorphic rock formation. 4. Recognize important rock types and describe their mineral composition and structure. II. Earth Materials On successful completion of this module, the students should be able to: 5. Identify the crystallographic and physical-chemical properties of minerals. 6. Classify minerals into crystallographic and chemical classes.				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

	7. Identify the salient properties (chemical formula, crystal form, Moh's hardness, density, color, cleavage and fracture) of native elements, hydroxide and halide, silicate, carbonate, oxide and sulphide minerals. 8. Identify the industrial uses and environmental properties of the metallic and non-metallic ores and gemstones. 9. Identify important minerals and know their respective chemical formulae. III. Earth Resources On successful completion of this module, the students should be able to: 10. Classify ore deposits into groups of metallic and non-metallic raw materials and recall the different types of ore deposits. 11. Recall the processes of endogenous and exogenous ore deposit formation in the context of plate tectonics. 12. Recall the global distribution of ore deposits of the various raw materials. 13. Recall the properties and uses of the main ores and industrial minerals and volume commodities. 14. Recall the economic, technical and ecological aspects of the extraction of raw materials. 15. Summarize terms measures for the sustainable use of Earth resources in qualitative terms. 16. Recognize relevant ore samples and describe their mineral composition and structure. IV. Earth's atmosphere On successful completion of this module, the students should be able to: 17. Identify weather and climate elements 18. Recognize monitoring tools of weather elements 19. Recall the fundamentals of the global atmospheric circulation system 20. Clarify past, current, and future climate scenarios.

PROG101 – ALGORITHMS AND PROGRAMMING

Module title	Algorithms and Programming			Module code	PROG101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Kh. Uyanga			Language	English
Contents	1. Introduction of Programming Languages (history of C programming language, syntax, programming process, structure, executing and debugging); 2. Programming Methodologies (concepts of algorithm design, flowcharts and pseudo codes, number systems) 3. Structured language (keywords, identifiers, declarations, operators, constants, variables, data types (integer, floating-point data), library functions) 4. Control Statement and Expressions (statements (if, if ... else, switch, goto), arithmetic expressions) 5. Looping (for, while, do while, jumping, break and continue) 6. Arrays (one, two, multidimensional) and string (variables and functions) 7. Functions and Program Structure (C: user-defined and system defined; 8. File Processing, discipline of programming				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Implement a variety of algorithms for searching and sorting, including linear search, binary search, insertion sort, selection sort, merge sort, quicksort, and heap sort. 2. Describe abstract data types used in C/C++ and explain their usage 3. describe commonly used syntactic constructions used in C/C++ 4. Develop programs and application 5. Apply knowledge in major courses and practical 6. Solve problems 7. Work independently

ENSO101 – ENGINEER IN SOCIETY (ETHICS)

Module title	Engineer in Society (Ethics)			Module code	ENSO101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Prof. B. Battsengel			Language	English
Contents	Team teaching: The role of the engineers in the society; focus on science and responsibility.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Differentiate between basic tenets of engineering science, natural science, and the humanities and to recognize the relevance for their profession. 2. Think critically about the role of the engineers in the society. 3. Recognize the ethical responsibility of the engineers in concrete situations and analyze and reflect these problems by using approaches from engineering ethics and argue in. 4. Reflect ethical problems caused by new technological developments, future questions involving technological policies and questions of political shaping and guiding of technological developments while considering their context within society and politics. 5. Think critically about specialist literature on basic tenets of science and the ethics of engineering 6. Express oneself in a differentiated way but yet be clearly understood both in oral and written form questions involving the basic tenets of science and ethics in an interdisciplinary context.

PROJ101 – ENGINEERING PROJECT

Module title	Engineering Project			Module code	PROJ101
Duration	1 week + report	Semester	Fall	Module start	1 st
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Prof. N. Battulga			Language	English
Contents	During the project, students work in small groups on an interdisciplinary assignment. Each student contributes to producing an interdisciplinary solution by working as a team with the resources from their individual disciplinary perspectives. The students of mechanical engineering experience the way an engineer deals with problems, they construct in methodology way and solve complex engineering tasks. The assignment is given out at the beginning of the project. Trained support staff accompanies the groups during the course of the project and encourages the development of social and subject-related skills.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Produce a goal-oriented solution through interdisciplinary teamwork. 2. Comprehend and work on an interdisciplinary assignment using design principles of mechanical engineering. 3. Moderate team processes. 4. Plan, organize and carry out tasks independently. 5. Discuss possible solutions and to reach a decision that is guided by criteria 6. Acquire competence in applying scientific methods and to analyze different problems of a task 7. Present different results to an auditorium and to discuss them respectively 8. Reflect scientific acting and assess its societal consequences.				
Literature	Script				
Form of teaching	Project course (2 UoI)				
Assessment method	Successful participation, group presentation, poster, report				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Passing the module				
Grading system	Pass/ Fail

Environmental Engineering, incl. Study Plan and Module Handbook

ENGL101 – TECHNICAL ENGLISH

Module title	Technical English			Module code	ENGL101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Robin Charpentier			Language	English
Contents	1. General vs Technical English; Latin and Greek Roots 2. Geotechnology 3. Properties of Metals 4. Material Formats 5. Plastics, Elasticity 6. Ceramics, Glass, Wood 7. Precision, Accuracy in Measurements, Safety 8. MID-TERM EXAM 9. Process Engineering 10. Fluid Dynamics, Architectural Drawings/Design 11. Electricity and Magnetism 12. Math, Statistics, Graphs, Data Ethics 13. Invention/Innovation/ Spinoffs 14. Sustainability; the Circular Economy 15. Presentation Topic Approval; About Infographics, Poster Sessions 16. Final Presentations – Poster Session (Infographics)				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Demonstrate understanding of, and properly express/describe STEM – related: abbreviations, root meanings, and definitions of symbols, words, and phrases; graphs and the behavior of lines; equations; and simple technical processes, using appropriate terminology and structures 2. Read short texts on a broad range of STEM – related topics at an intermediate to high-intermediate level, in order to understand some technical details and identify the core meanings, and summarize the information in their own words 3. Follow and grasp the main points in a lecture, including audio-visual material at an intermediate to high-intermediate level, on a broad range of topics in STEM – related fields 4. Effectively communicate both orally and in writing on a broad range of STEM – related topics, in English, using relevant stylistic structures				
Literature	1. Barbara A. Cornelen Campus: Englsih for Mechanical Engineering. B2 Coursebook: Cornelsen; 2011. 2. Supplementary materials related to topics covered				
Form of teaching	Recitation (4 Uol)				
Assessment method	(70%) = Written final examination (30%) = Active in-class participation (15%); tests, mid-term exam, final oral presentation [poster session] (15%)				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering
Prerequisites for participation	- English at the C1 level in all 4 skills - Have an expressed interest in engineering as their major
Requirements for receiving credit points	- Attendance is recorded for those arriving before the scheduled start time - Students must attend at least 80% of the classes in this to be eligible to sit for the Final Exam - Participation means: volunteering answers; asking and/or responding to questions; paying attention; actively focusing on in-class tasks; turning in assignments on time and with good quality - There is zero tolerance for cheating in this Module - ChatGPT/AI Policy: I am not interacting with a machine, so DON'T use it
Grading system	The modes of assessment total 100%

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

INCC101 – INTRODUCTION TO INTERCULTURAL COMMUNICATION AND COMPETENCE

Module title	Introduction to Intercultural Communication and Competence			Module code	INCC101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Robin Charpentier			Language	English
Contents	1. Elements and Definitions of Culture 2. Identity: Scale, Boundaries, Aspirational, Ascriptive 3. Theories and Models of Culture 4. Shared vs Unique Aspects of Identity 5. Cultural Awareness 6. Communication Types – Identification and Practice 7. Direct/Indirect Communication in Different Cultures 8. What do we Need to Know About Them? 9. Mid-Term Exam 10. Stereotypes, Prejudice 11. Conscious/Unconscious Bias 12. Exploring Communications Approaches - Models 13. Meyers-Briggs Type Indicators 14. Cultural Awareness Levels; 15. Stages of Cultural Adjustment 16. Case Studies: Analyzing Critical Incidents				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Understand their own cultural background and values, and their importance in dealing successfully with people from other cultures 2. Recognize sensitive cultural particularities, and try to respond to these differences in an appropriate and tactful manner 3. Analyze, post hoc, intercultural incidents that have occurred and develop problem solving strategies for future such cases				
Literature	1. Glaser E, Guilherme M, Garcia MCM, Mughan T. Intercultural Competence for Professional Mobility: Council of Europe Publishing; 2007. 2. Bennett MJ. Basic Concepts of Intercultural Communication: Paradigms, principles, and practices. 2nd ed. Boston: Intecultural Press; 1998. 3. Other materials pertinent to the topics				
Form of teaching	Recitation (2 UoI)				
Assessment method	(70%) = Written final examination (30%) = Active in-class participation (15%); turning in assignments on time and with good quality, mid-term exam (15%)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

Prerequisites for participation	English at the C1 level in all 4 skills
Requirements for receiving credit points	1. Attendance is recorded for those arriving before the scheduled start time 2. Students must attend at least 80% of the classes in this to be eligible to sit for the Final Exam 3. Participation means: volunteering answers; asking and/or responding to questions; paying attention; actively focusing on in-class tasks; turning in assignments on time and with good quality 4. There is zero tolerance for cheating in this Module 5. ChatGPT/AI Policy: I am not interacting with a machine, so DON'T use it

TIME101 – TIME MANAGEMENT

Module title	Time Management			Module code	TIME101
Duration	1 semester	Semester	Fall	Module start	1 st
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	The students will learn time management skills and self-development skills. • Time management for successful school life • Shaping thinking frame • Values & purpose of life • Prioritizing tasks • Systematic management of tasks • Objective management • Reading & study skills for enhancing intelligent capacity				
Learning outcomes	On successful completion of this module, students should be able to: 1. Recognize the need of time management in their life. 2. Identify greatest time wasters and avoid them 3. Apply time management skills for effective school life. 4. Prioritize and organize tasks systematically. 5. Develop and align their long- and short-term objectives along with life-goals. 6. Motivates themselves for study at GMIT. 7. Apply reading and thinking skills for their study.

Environmental Engineering, incl. Study Plan and Module Handbook

MATH102 – MATHEMATICS II

Module title	Mathematics II			Module code	MATH102
Duration	1 semester	Semester	Spring	Module start	2 nd
Credit points	8 CP	Workload	240 h	Contact hours	96 h
				Individual study	144 h
Module coordinator	Prof. L. Altangerel			Language	English
Contents	- Series: numerical series, power series, Fourier series and Fourier transform; - Differential calculus of functions of several variables: convergence and continuity, partial derivatives, total differentiability, extreme value problems - Line integrals, integration over regions, surface integrals - Basics of ordinary and partial differential equations: modelling using differential equations, first and second order ordinary differential equations, system of ordinary differential equations, basic concepts of partial differential equations.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Demonstrate and apply the basic concepts of series; 2. Explain and calculate differential and calculus of functions of several variables. Be aware of their connections and potential applications in other fields. 3. Demonstrate and apply the basic concepts of ordinary and partial differential equations; 4. Make use of mathematical models to solve complex scientific and engineering problems.

MATS101 – MATERIALS SCIENCE

Module title	Materials Science			Module code	MATS101
Duration	1 semester	Semester	Spring	Module start	2 nd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	R. Nyamdulam			Language	English
Contents	• Introduction to Interatomic bonding Attractive and repulsive forces; Primary bonding, secondary bonding, and Van der Waals bonding • Introduction to Crystal Structures Crystalline and amorphous structures; single crystalline and polycrystalline materials, and crystal systems • Imperfection in Solids Chemical impurity; solid solution, point defect, linear defect, planar defect, volume defect • Mechanical properties Engineering stress, and engineering strain; Hooke’s Law; Destructive, and Non-destructive testing techniques • Thermal behavior Heat capacity; Thermal expansion; Thermal conductivity, thermal shock • Phase Diagrams/ Phase Transformations Various phase regions; Compositions of phases; Binary phase equilibrium; Heat treatment processes; Kinetics of Phase transformation • Structural Materials Organic (Polymers and Composites) and Inorganic (Metals, Ceramics and glasses) materials, and their application • Electrical properties and Electronic Materials Conducting materials, insulators, semiconductors, and their application • Optical properties and Materials • Magnetic properties and Materials • Social and Environmental impact				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe the connection between atomic structure, and identify different types of crystal structures. 2. Describe the impacts of defects at the atomic and microstructure scales 3. Explain thermally activated processes, 4. Explain the significance of the main mechanical properties in relation to component design. 5. Explain the fundamentals of non-destructive testing. 6. Select materials in a responsible manner. 7. recognize and apply the significant properties for mechanically characterizing materials. 8. Explain diffusion processes.

ENME101 – ENGINEERING MECHANICS I (STATICS)

Module title	Engineering Mechanics I (Statics)			Module code	ENME101
Duration	1 semester	Semester	Spring	Module start	2 nd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	General systems of forces. Equilibrium of rigid body. Reaction forces at structural supports. Moment by forces. Structural analysis of truss, beams, frame structures. Center of mass, area, volume. Virtual work principle. Friction. Stability of column structure.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain the concept of force, moment, and equilibrium state in Statics. 2. Establish equilibrium equations and solve statically determinate structures. 3. Compute support reaction forces in statically determinate systems by means of equilibrium conditions or the principle of virtual work. 4. Compute internal forces in beam and truss structures and discuss the effects of external forces on structures. 5. Use shear force diagram and bending moment diagram to interpret the effect of external forces on structures. 6. Compute the center of mass, volume, and area. 7. Apply Pappus principle to calculate volume and surface area of revolving objects. 8. Classify friction type in simple machines and compute proper friction forces.

Environmental Engineering, incl. Study Plan and Module Handbook

CHEM102 – CHEMISTRY LABORATORY

Module title	Chemistry Laboratory			Module code	CHEM102	
Duration	1 semester	Semester	Spring Semester		Module-start	2 nd
Credit points	3 CP	Workload	90 h	Contact hours	36 h	
				Individual study	54 h	
Module coordinator	J. Bayardulam			Language	English	
Contents	Selected experiments in the fields of general chemistry, analytical chemistry and electrochemistry: unaided acquisition of knowledge, colloquia and written reports. <u>Laboratory practical work</u> • Properties of matter – boiling point • Reaction of magnesium and calcium with water – hydroxide • Quantitative analysis of oxides and properties of mixture • Formation of salts by reaction of metals with acids • Detection of an acidic reaction with various indicators • Estimation of copper by colorimetric method • Electrolysis of water • Rate of chemical reaction • Electrochemical cell • Observing Chemical Equilibrium • Precipitates and Solubility Rules • Hess's law					
Learning outcomes	On successful completion of this module, the students should be able to: 1. apply simple working procedures in the laboratory. 2. Determine physical and safety-related data for materials, and interpret it in context. 3. use experimental equipment in accordance with the safety regulations, and carry out experiments. 4. work together in small groups. 5. prepare a technical report on an experiment and present the results of the experiment in a suitable form. 6. use technical terms and expressions in English.					
Literature	1. Allan BJ. Laboratory Manual for Principles of General Chemistry. 10th ed.: Wiley; 2014. 2. Atkins JL. Chemical Principles. 6th ed.: W.H. Freeman and Company; 2013. 3. Brown L, Holme T. Chemistry for Engineering Students. 2nd ed.: Brooks Cole; 2010.					
Form of teaching	Laboratory (3 UoI)					
Assessment methods	Pre-lab questions before conducting lab experiments, and post-lab defense and written documentation (lab reports) after the experiment. Midterm exams after completing 6 modules each.					
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering

Environmental Engineering, incl. Study Plan and Module Handbook

BAEM101 – INTRODUCTION TO BUSINESS ADMINISTRATION AND ENGINEERING MANAGEMENT

Module title	Introduction to Business Administration and Engineering Management			Module code	BAEM101
Duration	1 semester	Semester	Spring	Module start	2 nd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Ch. Enkhzaya			Language	English
Contents	Students will be introduced to basic principles of business administration. In addition, the module prepares students for courses to come in engineering management. Business administration studies problems within the firm and relates to problems in the fields of production organization, strategy, marketing and logistics, finance and accounting, and information management: - History and state of the art of business administration as a discipline (fundamentals, managing, and performing, technology-driven management) - Why do firms exist? (causes and goals of firms, the structure of a firm, business environment) - How to manage processes, teams and firms? - Constitutive decisions - Production - Basics of marketing and sales - Investment and Financing - Business Accounting - Managerial communication Additionally, the Module should enable the students to understand the specifics of the private sector - function and structure - in Mongolia				
Learning outcomes	On successful completion of this module, the students should be able to: - Remember and understand what is this discipline about. - Describe the boundaries of the discipline towards other disciplines like e.g. macro economy or natural sciences - Explain the principles on which firms exist and make decisions - Identify various fields of the firm's activities - Understand the legal environment in which firms operate - Analyze core functions of firms by breaking them into constituent parts (purchase, production, sales and marketing, HR, operations and controlling, etc.), and by determining how the parts relate to one another - Evaluate the performance of firms according to criteria and standards - Develop or create solutions for general managerial tasks

Environmental Engineering, incl. Study Plan and Module Handbook

ENME201 – ENGINEERING MECHANICS II (DYNAMICS)

Module title	Engineering Mechanics II (Dynamics)			Module code	ENME201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	Kinematics of particles and rigid body. Coordinate systems in Dynamics. Physical quantities in various coordinate systems. Projectile motion. Kinetics of particles and rigid bodies. Work and energy of particle and rigid body. Linear momentum and impulse of particle and rigid body. Angular momentum and impulse of rigid body.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe planar and spatial motions of particle and rigid bodies using coordinate systems. 2. Formulate dynamic problems into equation of motion applying the Newton’s law of motion. 3. Calculate acceleration, velocity of moving objects applying work and energy concept. 4. Calculate motion of rigid body applying angular momentum and impulse. 5. Integrate the principles of Dynamics and Statics to formulate engineering problems. 6. Distinguish the difference between linear and angular momentum and impulse theory and solve dynamic problems.				
Literature	1. Gross D, Hauger W, Schröder J, Wolfgang A. Wall, Sanjay Govindjee. Engineering Mechanics 3: Dynamics. 2nd ed.: Springer-Verlag Berlin Heidelberg; 2014. 2. Kraige LG, Meriam JL. Dynamics. 7th ed.: Wiley; 2013.				
Form of teaching	Lecture (2 UoI) Recitation (2 UoI)				
Assessment method	Written examination (90 min.) and academic performance				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Mathematics I, Engineering Mechanics I (Statics) recommended				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.				

STAT201 – INTRODUCTION TO STATISTICS

Module title	Introduction to Statistics			Module code	STAT201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	G. Dorjsundui			Language	English
Contents	The module has two strongly related parts as probability and statistics. The first part covers an introduction to probability and random variables. Topics include distribution functions, binomial, geometric, hypergeometric, and Poisson distributions. The other topics covered are uniform, exponential, normal, gamma and beta distributions; conditional probability; Bayes theorem; joint distributions; law of large numbers; and central limit theorem. The second part offers an in-depth theoretical and practical foundation for statistical methods that are useful in many applications. The goal is to understand the role of statistical thinking in the engineering field				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Have fundamental approaches of probability calculation and conceptual definitions. 2. Set up and work with discrete and continuous random variables. In particular, understand the Bernoulli, binomial, geometric, Poisson distributions, uniform, normal and exponential distributions. 3. Know what expectation and variance mean and be able to compute them and extend the convergence of statistical inference. 4. Explain and interpret the quantitative data as descriptive statistical results including tables and graphs. 5. Understand the difference between probability and likelihood functions, and find the maximum likelihood estimate for a model parameter with basic confidence intervals. 6. Demonstrate null hypothesis significance testing to test the significance of results, and understand and compute the p-value for these tests. 7. Compute and interpret simple linear regression between two variables.

THER201 – ENGINEERING THERMODYNAMICS

Module title	Engineering Thermodynamics			Module code	THER201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. B. Battsengel			Language	English
Contents	Fundamental terms of thermodynamics; thermodynamic equilibrium and temperature; different forms of energy (internal energy, heat, work, enthalpy); properties and equations of state for gases and incompressible substances; first law of thermodynamics and energy balances for technical systems; second law of thermodynamics and entropy balances for technical systems; exergy analysis; thermodynamics of phase changes; the Carnot cycle for power generation or refrigeration; energy efficiency and coefficient of performance; cyclic processes for gas turbines, combustion engines, power plants, refrigerators and heat pumps				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain the relationships between thermodynamic properties and the thermodynamic state of a system, and apply them in calculating a thermal system behavior. 2. Distinguish between different types of energy (e.g. work, heat, internal energy and enthalpy) and define them. 3. Analyze technical systems and processes using energy balances and equations of state. 4. Assess energy conversion processes by means of an exergy analysis. 5. Characterize the thermal behavior of gases, liquids and solids, and corresponding phase change processes. 6. Apply this basic knowledge (1.-5.) to examine machines (turbines, pumps etc.) and processes for energy conversion (combustion engines, power plants, refrigerators, heat pumps).

DESN201 – ENGINEERING DESIGN

Module title	Engineering Design			Module code	DESN201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	Drawing letters and numbers. Drawing polygon and ellipse. Isometric projection. Orthographic projection. Perspective projection. Oblique projection. Dimensions. Gears and Cams. Tolerance. Geometric tolerance. Mechanical design concept.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Draw alphabets and numbers following the engineering drawing custom. 2. Draw bisect line, perpendicular line, bisect angle line. 3. Make drawings of objects using isometric projection, orthographic projection, oblique projection, and perspective projection. 4. Interpret drawings of multi-view projection of objects and draw them using isometric projection. 5. Draw cam profile based on the cam drawing. 6. Explain gear parts and calculate gear shape. 7. Interpret and make tolerance drawing and geometric tolerance drawing. 8. Model mechanical drawing of parts.				
Literature	1. Giesecke et al. Technical drawings with engineering graphics. 14th ed.: Pearson; 2014. 2. Mott RL. Machine Elements in Mechanical Design. 4th ed.: Prentice Hall; 2004.				
Form of teaching	Lecture (2 UoI) Recitation (2 UoI)				
Assessment method	Written examination (120 min.) and academic performance

ELEC201 – INTRODUCTION TO ELECTRICAL ENGINEERING

Module title	Introduction to Electrical Engineering			Module code	ELEC201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. P. Ariunbolor			Language	English
Contents	Electrical charge, electrical current, electrical voltage and power, linear DC circuits, Ohm's law, Kirchhoff rules, ideal and real sources, electrical field, capacitor, electrostatic forces, capacitors in linear networks, magnetic field, Lorentz force, Ohm's law of the magnetic network, Ampere's circuital law, ferromagnetism, induction, self-inductance, inductors in linear networks, basic of electric machines and electric safety and power supply system				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Use electrical quantities and units. 2. Calculate linear DC circuits. 3. Calculate work, power, and energy. 4. Analyze and calculate simple linear AC circuits. 5. Design simple electronic circuits 6. Apply the knowledge of electric safety.				
Literature	1. Theraja BL, Theraja AK. A Textbook of Electrical Technology in SI Units. Volume I: Basic Electrical Engineering: S Chand & Co Ltd; 1999. 2. Cathey JJ, Nasar SA. Schaum's Outline Series Theory and Problems of Basic Electrical Engineering: McGraw-Hill; 1983.				
Form of teaching	Lecture (2 Uol) Recitation (2 Uol)				
Assessment method	Written examination (90 min.) and oral examination for documentation and presentation (10-30 min. per each student				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Completion of Mathematics I is recommended				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.

MINE201 – INTRODUCTION TO MINING

Module title	Introduction to Mining			Module code	MINE201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. T. Hollenberg			Language	English
Contents	The course aims to support students in acquiring the knowledge about extraction of raw materials and the influence of the mining industry on the development of resource rich countries through mining, processing and value adding. 1. Market economics 2. Prospection and Exploration, Deposit assessment 3. Ground mechanics 4. Equipment Selection and Requirements 5. Mining method selection 6. Surface Opening and Development 7. Surface Ore Handling Techniques 8. Surface Mining Operations and Variations 9. Underground Development 10. Underground Ore Handling Techniques 11. Underground Mining Operations and Variations 12. Hydraulic and Pipeline Mining 13. Shallow and Deep Drilling 14. Mineral processing 15. Mining and Environment 16. Community and social issues				
Learning outcomes	Upon successful completion of this module, students will, through assessment activities, show evidence of their ability to: 1. Analyze different raw material deposits and evaluate the economic value. 2. Identify the principles of the technologies and apply selection methods for mining operations. 3. Plan and design mining operations and choose appropriate technologies for given circumstances. 4. Recognize the machines and technologies used in open pit and underground mining. 5. Calculate the main parameters of simple technological chains.

ECON201 – INTRODUCTION TO ECONOMICS

Module title	Introduction to Economics			Module code	ECON201
Duration	1 semester	Semester	Fall	Module start	3 rd
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Dr. P. Bolormaa			Language	English
Contents	This module provides: • Introduction: What is economics, Economic Problem • How market works: Demand and Supply, Market Equilibrium, Elasticity, Markets in Action • Firms and Markets: Organizing Production, Output and Costs, Perfect Competition, Monopoly, Monopolistic Competition and Oligopoly • Factor Markets: Markets for factors of production such as labor market and capital market				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain big questions of economics and key ideas that define the economic way of thinking; 2. Describe a competitive market, explain the influences on demand and supply, explain how demand and supply determine market equilibrium. 3. Calculate and explain the factors that influence the elasticities of demand and supply. 4. Explain what a firm is and describe the economic problems that all firms face, describe and distinguish between different types of markets in which firm operates. 5. Explain the relationship between a firm's output and labor employed in the short run, explain the relationship between a firm's output and costs in the short run and derive a firm's short-run cost curves, and explain the relationship between a firm's output and costs in the long run and derive a firm's long-run average. 6. Define perfect competition, monopoly, monopolistic competition and oligopoly, explain how firms make their supply decisions in these markets, and why perfect competition is efficient and why others are inefficient. 7. Explain the link between a factor price and factor income, explain what determines demand, supply, the wage rate, and employment in a competitive labor market, and explain what determines demand, supply, the interest rate, saving, and investment in the capital market.

MEAS201 – MEASUREMENT, INSTRUMENTATION AND CONTROL BASICS

Module title	Measurement, Instrumentation and Control Basics			Module code	MEAS201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. P. Ariunbolor			Language	English
Contents	• Measurement technology: physical significance, measuring arrangement, measurement chain, errors, the main procedures for measuring temperature, pressure, flow and filling levels • Data-processing technology: measuring transducers, measured value boards (hardware), measurement software, processing and analysis programs • Regulator technology: product-integrated regulators, autonomous regulators (industry standard regulators), compact regulator stations, programmable regulator stations • Process control technology: signal/packet-based data transmission, bus systems, transmission paths, coupling stations, engineering stations, software process manager, MES, ERP				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Demonstrate the physical principles of measurement and recognize the process relationships in specific application examples. 2. Describe the digital processing of measurements. 3. Describe the operating method of control and regulating equipment, and set up the parameters of these devices. 4. Assess the options for optimizing automation equipment and evaluate existing automation systems.

Environmental Engineering, incl. Study Plan and Module Handbook

CAD201 – COMPUTER AIDED DESIGN (CAD)

Module title	Computer Aided Design (CAD)			Module code	CAD201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. Sungchil Lee			Language	English
Contents	Development of CAD software. Environment of AutoCAD. Basic drawing commands: line, circle, polygon, etc. Modification commands: copy, move, trim, extends, join, break, array, insert, etc. Text commands. Miscellaneous commands. Dimensions. Geometric tolerance. Hatching. Layers. Blocks. Drawing mechanical parts. Drawing multi-view projections of object. Design mechanical parts.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Draw basic geometrics: line, circle, rectangle, etc. 2. Edit drawings using modification commands. 3. Apply each line style appropriately in drawings. 4. Draw dimensions and modify existing dimensions. 5. Interpret and make general tolerance and geometric tolerance 6. Utilize layers to draw efficiently. 7. Make and save blocks and utilize them in drawing. 8. Criticize mechanical drawings.

Environmental Engineering, incl. Study Plan and Module Handbook

FLME201 – FLUID MECHANICS

Module title	Fluid Mechanics			Module code	FLME201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. N. Battulga			Language	English
Contents	- Basic concepts in fluid mechanics, such as continuum, velocity field, and vorticity. - Dimensional analysis - Principle of the mass conservation and the Newton's law to describe the fluid motion and solve basic engineering problems. - Fluid motion for inviscid fluids, internal flows (e.g. pipe flows), external flows (airfoils and bluff bodies), and flows with a free surface.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Calculate fluid flow regimes, including laminar vs turbulent flows; boundary layers and velocity profiles; 2. Apply Dimensional Analysis techniques; 3. Compute basic hydrostatics problems involving manometers and submerged surfaces. 4. Demonstrate the concept of continuity, 5. Demonstrate Bernoulli's principle, and apply it in flow measurement (orifice and Venturi meter, Pitot-static tube), and to a variety of problems involving area change and height change. 6. Solve basic problems involving pressure losses through pipes and pipe bends and fittings. 7. Apply Momentum equation and the concept of a control volume. Use the equation to calculate impulse and reaction forces due to the interaction of a fluid stream with objects, and pressure drops.

RREC201 – RAW MATERIALS AND RECYCLING

Module title	Raw Materials and Recycling			Module code	RREC201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Dr. T. Narangarav			Language	English
Contents	The technical and legal principles will be covered in relation to selected topics in raw material management and recycling: • Legal principles (material-specific and country-specific). • Quantities of waste material and primary raw material. • Raw material prices and recycling costs. • The market for secondary raw materials. • Quality requirements, and basic technical principles. • Examples of recycling processes. • Current legal requirements, and the effects and repercussions upon trade, industry, and local authorities. • Demonstration of various different economic measures for recycling by means of practical examples. Cycles will be considered in the following industrial sectors: iron and steel, non-ferrous metals, mineral raw materials, and wood.				
Learning outcomes	On successful completion of this module, students should be able to: 1. Describe the technical and economic principles of lifecycle economy, recycling, and the identification and remediation of contaminated sites. 2. Explain the technical relationships, the differences between free and regulated markets, and the controlling function of the legal system in recycling, and the remediation of contaminated sites. 3. Apply the gained knowledge by carrying out a piece of independent practical work, and publicly presenting their knowledge and experience of complex technical/economic/legal matters.

SCIM201 – SCIENTIFIC METHODS

Module title	Scientific Methods			Module code	SCIM201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	Prof. L. Altangerel			Language	English
Contents	This topic introduces students to the broad quantitative and qualitative approaches to research in the field of education. Students examine the key steps in the process of conducting research including identifying research problems, reviewing the literature, developing research questions, collecting and analyzing data, and reporting and evaluating research. Students are asked to consider the context, nature and purposes of research in selecting a research method. Students are encouraged to integrate their research interest in their learning process. The module aims to • Introduce to a range of approaches to scientific research and relationship to philosophical thinking; • Critically examine the similarities and differences between quantitative and qualitative research works and their effect on research method selection; • Develop an understanding of the key elements of the research process including: research problems, literature, reviews, research questions, collecting and analyzing data as well as reporting and evaluating research				
Learning outcomes	On successful completion of this module, students should be able to: 1. Identify and describe a variety of approaches to research, their similarities and differences, and arguments for and against the use of each approach. 2. Develop an understanding of the key elements of the research process including research problems, literature reviews, research questions, collecting and analyzing data; and reporting and evaluating research. 3. Understand scientific research papers and recognize articles that addresses an area of research from different philosophical perspectives. 4. Identify original contributions to research, to policy and/or management and/or practice. 5. Carry out independently a small-scale research.

HSE201 – HEALTH SAFETY ENVIRONMENT (HSE)

Module title	Health Safety Environment (HSE)			Module code	HSE201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	B. Erdenebaatar			Language	English
Contents	. Principles of Health/Safety/Environment Management (HSE) History, terminology, basis, duties and quality goals of HSE; overview of national and international law, sustainability model/indicators; principles of complex working systems, cause and effect model, risk reduction model, regional material flow and area management, operational material flow management; health/safety/environmental technology, working environment, organization and human behavior; overview, selected risks and stresses, emissions and immissions; event statistics, environmental auditing, environmental compatibility, environmental declaration, environmental performance assessment, principles of ecological life cycle balancing, principles for constructing and implementing management systems (PDCA cycle) I. Methods for Health/Safety/Environment Management Assessment of HSE effects (basis and methods for form-based assessment, determination and evaluation of risks and stresses, analysis methods); hierarchy of protective measures, key performance indicators (KPIs), ecological book-keeping, estimation of technical consequences, methods for quantifying the environmental relevance of emissions and immissions, audits, continuous improvement process, etc.); prevention, operation with goals, influencing behavior, environmental cost calculation, eco-cost control; Certification of management systems (e.g. EMAS, EN ISO 14001 ff., EN ISO 9001 ff., OHSAS 18001 ff.), integrated management system				
Learning outcomes	On successful completion of this module, students should be able to: 1. Describe the basic scientific principles, methods and instruments for protection of the workplace, health and the environment, and sustainability management, and to apply the requirements of the standards to selected operational examples. 2. List the risks and stress factors and evaluate emissions and immissions. 3. Analyze complex work systems in terms of the causal chain (cause-effect-damage) and select protective measures. 4. Describe the structure, Contents and goals of the main HSE management systems, describe the duties of the technical and managerial personnel in terms of analysis, organization and activities

LAW201 – LAW

Module title	Law			Module code	LAW201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	G. Surakhbayar			Language	English
Contents	This module introduces students to the basics of national and international environmental law. Including: • Overview of Environmental Concepts, Theories, Sources; • Protecting Environmental Objects such as Air, Water, and Wildlife in Mongolia • International Environmental Norms				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe the roles of contemporary theories, concepts, and sources concerning environmental protection. 2. Examine the importance of environmental laws & regulations and its application within the Mongolian court system. 3. Assess interactions between environmental laws & regulations and other domestic laws. 4. Apply environmental rules and norms to specific environmental issues in Mongolia.

INTR201 – BASIC INTERNSHIP

Module title	Basic Internship			Module code	INTR201
Duration	1 semester	Semester	Spring	Module start	4 th
Credit points	2 CP	Workload	120 h	Contact hours	NA
				Individual study	120 h
Module coordinator	Department of Academic and Student Affairs			Language	English
Contents	During the internship, students will be introduced to the social structures in the company, work processes, the relationship between employees, supervisors and executives, and teamwork as well as the responsibility of the individual employee. The Basic Internship helps the students to decide on a major or confirm the decision they have already made.				
Learning outcomes	After taking part in the industrial placement, the student should be able to: 1. Explain the company structure and its work processes. 2. Describe the duties and tasks of positions in the company. 3. Do simple SWAT analysis for the company. 4. Provide a written statement of the activities carried out, an appropriately record their observations and experiences.				
Literature	None				
Form of teaching	Basic internship (6 weeks)				
Assessment method	Written report (min. 10 p.)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Confirmation of participation in the internship, Acceptance of the written report.				
Grading system	Pass / Fail

Environmental Engineering, incl. Study Plan and Module Handbook

PROFESSIONAL MODULES (5TH – 8TH SEMESTER)

ENVE301 – GEOECOLOGY

Module title	Geoecology			Module code	ENVE301
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Dr. S. Enkhjargal			Language	English
Contents	The module provides fundamental knowledge of interdisciplinary relations, composition, structures and properties of main ecological functions of the Earth and changes in ecology under natural and anthropogenic influences. Topics of the module: • Introduction into General Ecology and Biogeography: Components of ecosystems; ecosystem processes; ecosystem dynamics; levels considered in ecology (from individuals to the biosphere); ecological niches; global distribution of vegetation and fauna (biomes, historical migration pathways) • Geoecology of Mongolia: 1. Climatology: climatic conditions and regional differences within Mongolia; relevant global and regional circulation pattern affecting Mongolia's climate; air masses and their influence on Mongolia's weather and climate pattern 2. Hydrology: drainage basins of Mongolia, major river and lake systems and their properties 3. Soil science: major soil types of Mongolia (formation, properties, challenges for management) 4. Biogeography: ecological zones of Mongolia (desert, grassland, taiga, tundra) and their ecosystems • Conservation and restoration ecology: forms of environmental degradation; principles of environmental preservation and conservation; self-recovery potentials of ecosystems; carrying capacity and tipping points of ecosystem degradation; assisted rehabilitation and restoration of ecosystems (e.g. remediation techniques); case studies from Mongolia (e.g. rehabilitation of mining land, wildlife conservation, urban ecology)				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe linkages between the physical environment and ecosystems at the global level and specifically for Mongolia Learning 2. Explain the functional processes and dynamics of ecosystems 3. Identify various impacts of human activities on environment 4. Illustrate the self-recovery potentials of nature and the limits of environmental carrying capacity with specific changes 5. Examine different options for the restoration of degraded ecosystems

Form of teaching	Lecture (2 UoI) Recitation (2 UoI)
Assessment method	Written examination (90 min.) and academic performance.
Associated study program	B.Sc. Environmental Engineering
Prerequisites for participation	Introduction to Geosciences
Requirements for receiving credit points	Passing the module
Grading system	The final grade consists of the academic performance during the module accounting for 70% and the module examination accounting for 30%.

ENVE302 – PRINCIPLES OF WATER TECHNOLOGY

Module title	Principles of Water Technology			Module code	ENVE302
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Dr. Ts. Ariuntuya			Language	English
Contents	Introduction of basic principles of water related subjects namely, water supply, wastewater characteristic, and urban drainage.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Interpret components of biogeochemical cycles in ecosystem 2. Identify the water quality and wastewater characteristic monitoring and function of water treatment systems. 3. Solve the problems by hydraulic and hydrological equations for water distribution and wastewater drainage system. 4. Select methods for water sampling and conduct measurements with multi-parameters probe and devices. 5. Analyze environmental technologies for water and wastewater treatment system.

RMPE302 – MINERAL PROCESS ENGINEERING I

Module `title	Mineral Process Engineering I + Process Mineralogy			Module code	RMPE302
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	B. Myagmarjav			Language	English
Contents	1. Definition and importance of mechanical separation in mineral processing, physical properties of minerals for separation, particle characterization, and particle liberation. 2. Basic operations in procedural technique: comminution and size separation technologies, basic principles of size classification, principles of crushing technology, devices for classification and comminution. 3. Principles of sedimentation and solid-liquid separation. 4. Importance of ore sampling procedure. 5. Process selection and flowsheet design in mineral processing.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe and explain the importance of mechanical separation, physical properties of minerals, and their effects for separation. 2. Design base enrichment flow sheets. 3. Evaluate mechanical separation results. 4. Determine particle liberation. 5. Evaluate the performance of comminution and classification equipment. 6. Enrichment by size classification.				
Literature	1. AT Mineral Processing Journal. 2. Wills BA. Mineral Processing Technology, 4th edition, Pergamon Pres, Oxford; 1988. 3. Weiss NL. SME Mineral Processing Handbook, New York: Society of Mining Engineers; 1985.				
Form of teaching	Lecture (2 UoI) Recitation (1 UoI) Laboratory (1 UoI)				
Assessment method	Written examination (90 min.) and academic performance.				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering				
Prerequisites for participation	Completion of semester 1-4				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 60% and the module examination accounting for 40%.

RMPE303 – PROPERTIES OF ROCK

Module title	Properties of Rock			Module code	RMPE303
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	E. Baljinnyam			Language	English
Contents	Mechanical properties of rock: formation and types of soft and hard rocks, in terms of dependent and independent properties, grain distribution, consistency limits, classification of soft rocks, dynamic compression tests, grain structure, total, effective and neutral stresses, deformation characteristics of linear isotropic elasticity theory, compressibility and time effects in oedometer tests, constrained modulus, effective and apparent shear strength, simplified triaxial test, biaxial test, true triaxial test, determination of deformation properties and shear strength in the triaxial test, determination of shear strength in a shear-load machine, hydraulic properties of soft rocks. Further properties of rocks will be described (density, water Contents, sources, hardness, abrasiveness), and description of the testing techniques for hard rocks (hydro-thermo-mechanically coupled tests, non-destructive testing techniques, Contents/syllabus of current testing regulations and standards) The students will carry out standard laboratory tests without assistance, and evaluate the results.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Demonstrate basic knowledge of geotechnical engineering in terms of the mechanical properties of soft rocks. 2. Describe the main mechanical and thermo-hydro-mechanical properties of rocks. 3. Determine these properties in the Rock and Soil Mechanics laboratory.				
Literature	International Journal of Rock Mechanics and Mining Sciences, Elsevier Verruijt, A. (2012) Soil Mechanics, Delft University of Technology Kenew, A.E. (2014) Geology for Engineering Scientists, Pearson				
Form of teaching	Lecture (2 UoI) Recitation/Lab (2 UoI)				
Assessment method	Written examination (90 min.) and academic performance.				
Associated study program	B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering				
Prerequisites for participation	Completion of semester 1-4				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.				

ENVE303 – GEOGRAPHIC INFORMATION SYSTEM (GIS)

Module title	Geographic Information System			Module code	ENVE303
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	36 h
				Individual study	84 h
Module coordinator	Dr. S. Enkhjargal			Language	English
Contents	The general aim of the module is to introduce a range of methods for collecting and analyzing data. Topics will include: • Outline of the principles of Geographic Information System (GIS); • Types of data and methods of data capture. • Spatial reference systems, availability and procurement of geo data; • Data models for creation of geo-relevant scenarios in GIS; • Geometrical, topological and attribute analysis functions in GIS; • Visualization of space-related data and scenarios; • Digital terrain models in GIS.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Have a knowledge of the main concepts of GIS. 2. Understand the application of GIS. 3. Understand remote sensing in various disciplines using case studies; 4. Understand the main principles of an analysis of spatial and remote sensing data. 5. Solve practical problems in various disciplines. 6. Use GIS analytical techniques to generate maps and analyze data. 7. Write a project report on GIS mapping and interpret.				
Literature	1. Burrough PA. Principles of Geographical Information Systems. Oxford University Press; 2014. 2. DeMers MN. Fundamentals of Geographical Information Systems. Wiley; 2008.				
Form of teaching	Laboratory (3 UoI)				
Assessment method	Project paper (at least 10 pages) and academic performance				
Associated study program	B.Sc. Environmental Engineering				
Prerequisites for participation	Introduction to Geosciences				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module, accounting for 30%, and the module examination accounting for 70%.				

ENVE304 – INTRODUCTION TO MICROBIAL BIOTECHNOLOGY

Module title	Introduction to Microbial Biotechnology			Module code	ENVE304
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Dr. T. Narangarav			Language	English
Contents	Cell and macromolecules. Types of microorganisms and their specific relevance for the environment and human health (protozoa, bacteria, viruses, helminths, fungi). Biotechnical applications of microorganisms – specific examples (e.g. wastewater treatment, food industry, bioleaching, biocontrol agents in agriculture, remediation of contaminated soils). Modifications of microorganisms by genetic engineering – potentials and risks. Drug – resistant microorganisms in the environment – current threats and control strategies. Biosafety and bioethics: the limits of using microorganisms in the natural and engineered environment. Detection of microorganisms in the laboratory scale on the environmental samples.				
Learning outcomes	This module aims at providing future engineers a general overview about the relevance of microbiology and potentials and limitations of microbial biotechnology. On successful completion of this module, students should be able to: 1. Describe the basic concepts of microbiology such as cells and macromolecules. 2. Differentiate between different microorganisms and identify their roles in the natural environment. 3. Describe the relevance of microorganisms for biotechnological applications. 4. Describe and critically reflect the potentials and risks genetic engineering of microorganisms. 5. Explain the growing threats by drug-resistant microorganisms in the environment and understand control strategies. 6. Evaluate safety and ethical issues related to the application of microbial biotechnology. 7. Grow bacteria in the laboratory and analyze the experimental data.

Form of teaching	Lecture (2 UoI) Recitation/Field trip/Laboratory (2 UoI)				
Assessment method	Oral examination (90 min.) and academic performance.				
Associated study program	B.Sc. Environmental Engineering B.Sc. Raw Materials and Process Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 50% and the module examination accounting for 50%.				

ENVE305 – CLIMATE CHANGE

Module title	Climate Change			Module code	ENVE305
Duration	1 semester	Semester	Fall	Module start	5 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. G. Gantuya			Language	English
Contents	This course is aimed to provide the broad scientific concepts for students to understand the drivers and impacts of anthropogenic climate change, negative impacts, international agreements on global climate change. The Contents of this module includes: • Introduction to atmosphere • Climate data collection and interpretation • Global energy balance • Greenhouse gases in the atmosphere and climate • Recent global warming and its impacts • Climate models • International agreements • Future climate change projections				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Identify the basics of climate 2. Analyze the reasons of climate change 3. Discuss the scientific evidence of climate change 4. Visualize the climate change 5. Discuss the problem and its effects 6. Choose the possible solutions				
Literature	1. Cole MW, Lueking AD, Goodstein DL. Science of the Earth, Climate and Energy, World Scientific Publishing; 2018. 2. Mann M. Environmental Engineering, incl. Study Plan and Module Handbook

ENVE306 – WASTEWATER TREATMENT

Module title	Wastewater treatment			Module code	ENVE306
Duration	1 semester	Semester	Spring	Module start	6 th
Credit points	6 CP	Workload	180 h	Contact hours	60 h
				Individual study	120 h
Module coordinator	Dr. Ts.Ariuntuya			Language	English
Contents	• Overview of the processes of wastewater purification (physical, chemical, biological). • Designing civil engineering works for wastewater purification. • Construction and operation of plants for wastewater purification. • Measurement, control and regulation technology for wastewater purification plants. • Treatment and disposal of the residue from wastewater purification • Centralized vs decentralized wastewater collection and treatment: specific needs for remote communities and urban ger areas in Mongolia. • Recovery of nutrients and other substances from wastewater. • Laboratory analysis of wastewater samples (e.g. physico-chemical standard parameters, BOD/COD, nutrients, indicator bacteria).				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe the commonly used processes for wastewater treatment and possibilities of combining different treatment stages. 2. Distinguish the specific advantages and disadvantages of central and decentral collection and treatment technologies. 3. Calculate and evaluate the sizing and design of wastewater treatment plants. 4. Analyze wastewater samples in the laboratory, and interpret the results.

ENVE307 – SOIL SCIENCE

Module title	Soil Science			Module code	ENVE307
Duration	1 semester	Semester	Spring	Module start	6 th
Credit points	6 CP	Workload	180	Contact hours	48 h
				Individual study	132 h
Module coordinator	Dr. S. Enkhjargal			Language	English
Contents	The module is designed to provide an overview of the fundamental concepts in of soil. Topics of the module: Soil formation: - anorganic source materials and forms of weathering - organic source materials and forms of decomposition - determinants of soil formation (climate, water, vegetation, fauna, topography / relief, time, human influence) - soil formation pathways on different substrates Properties of soils: - soil textures: sand, silt, clay, loam and other mixed textures - soil colors and their relevance - soil hydrology and aeration - soil chemistry, especially ion exchange processes and their drivers, soil pH and redox potential - biotic components of soils: roles of bacteria, fungi (e.g. mycorrhizae), invertebrates Soil types: - horizons and their relevance - translocation processes between horizons - soil classification systems and soil maps - major soil types of Mongolia Besides the theoretical backgrounds, this module introduces students to practical examinations of soils in the field and laboratory (texture, horizons, physico-chemical properties).				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe the main properties of soils and their formation. 2. Compare different soil types and textures according to their advantages and disadvantages for certain uses (e.g. agriculture). 3. Identify and characterize soil types and textures in the field using only simple aids (e.g. Munsell colour chart, finger tests). 4. Apply simple laboratory methods to quantify the moisture and organic carbon Contents of soils, soil texture, soil pH. 5. Combine different information sources to roughly assess soil fertility (cation exchange capacity). 6. Define influences on soil quality and manage the soil physical properties. 7. Describe the fundamentals of soil and land use management.				
Literature	1. Plaster E. Soil Science and Management. London: Delmar Cengage Learning; 2013.				
Form of teaching	Lecture (1 UoI) Recitation (2 UoI) Laboratory/Field trip (1 UoI)				
Assessment method	Oral (30 min.) or written examination (60 min.) and academic performance (including field report)

EEEJ306 – RENEWABLE ENERGY

Module title	Renewable Energy			Module code	EEEJ306
Duration	1 semester	Semester	Spring	Module start	6 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof.P.Ariunbolor			Language	English
Contents	This module introduces students to renewable energy sources, energy generation techniques, and the efficiency of energy usage: - Renewable energy sources (overview of hydropower, wind power, solar energy, geothermal systems and biomass): ecological advantages, challenges for implementation (cost, suitable locations, acceptance, and negative environmental impacts). - Solar Energy: Power Generation with Solar Energy; Solar insolation: Energy sources for photovoltaics, Photovoltaic technologies (Si-wafer based vs. Thin-Film PV), Solar cell materials - Wind power: wind characteristics (velocity distribution, density), power calculation and power curve of a wind turbine, structure of wind turbines (vertical, horizontal) - Hydroelectric power: Rainfall and run-off measurements and plotting of various curves for estimating stream flow and size of reservoir, power plants design, construction and operation of different components of hydro-electric power plants - RETScreen Software: https://www.nrcan.gc.ca/maps-tools-and-publications/tools/modeling-tools/retscreen/7465 Students will have the opportunity to learn the software RETScreen to design PV, Wind and Bioenergy systems. - Efficiency of energy usage in industry, at the municipal and domestic level (e.g. heating/insulation, efficiency of electrical appliances, energy efficiency in the transportation sector).				
Learning outcomes	On successful completion of this module, the students should be able to: - Explain the principles of the technical construction of renewable energy systems (Energy Sources, Solar Photovoltaic, Solar Tracking, Charge Controller and Inverter, Wind Power Systems, Wind Turbine Control, Biomass Technologies, Geothermal Power Generation, Energy from Water, Fuel Cells, Generators), - Design of wind- and solar-parks - Assess the efficiency of energy production and consumption for typical examples from Mongolia (e.g. thermal power plants, insulation of buildings, transport sector) - Apply knowledge about the preconditions for an effective usage of energy system

Environmental Engineering, incl. Study Plan and Module Handbook

	B.Sc. Raw Materials and Process Engineering
Prerequisites for participation	Completion of Introduction to Electrical Engineering is required.
Requirements for receiving credit points	Passing the module
Grading system	The final grade consists of the academic performance during the module accounting for 30% and the module examination accounting for 70%.

RMPE307 – MINING AND ENVIRONMENT

Module title	Mining and Environment			Module code	RMPE307
Duration	1 semester	Semester	Spring	Module start	6
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. T. Hollenberg			Language	English
Contents	The module aims in deepening the view of engineers on the responsibility of mining operations regarding environmental belongings like • Rehabilitation (reclamation and recultivation). • Assessing and minimizing intervention. • Compensation measures. • Environmental impact and spatial significance. • Resettlement problems. • Land rehabilitation. • Internal and external water cycles involved in raw materials operations. • Dust and noise emissions/emissions				
Learning outcomes	Upon successful completion of this module, students will, through assessment activities, show evidence of their ability to: 1. Describe and interpret the market pressures under which raw materials companies must operate today. 2. Summarize and evaluate the current requirements for environmental protection as applied to raw material extraction. 3. Reflect on the awareness of the whole question of environmental protection. 4. Recognize and evaluate specific problems by given case studies

INTR301 – INDUSTRIAL INTERNSHIP + REFLECTION

Module title	Industrial Internship + Reflection			Module code	INTR301
Duration	1 semester	Semester	Spring	Module start	6
Credit points	10 CP	Workload	14 weeks internship	Contact hours	
				Individual study	300 h
Module coordinator	Prof. G. Gantuya			Language	English
Contents	TBD prior to internship. The Industrial Internship experience provides students with opportunities to explore career interests while applying knowledge and skills learned in the classroom in a work setting. Internship experience also helps students gain a clearer sense of what they still need to learn and provides an opportunity to create professional networks.				
Learning outcomes	After taking part in the industrial placement, the student should be able to: 1. Explain the social side of the work process based on secondary socializing in the business, and describe the business as a social structure. 2. Assess his or her future position and prospects in the business. 3. Provide a written statement of the activities carried out, and appropriately record their observations and experiences. 4. Assess the specialization that he/she will choose for his/her career based on the studies to date, and the overall appreciation that has been gained by exposure to the practical, and in-depth experience of their theoretical knowledge. 5. Describe and evaluate the complex interrelationships between the areas preceding and following the production area. 6. Produce a written record of complex technical relationships and production processes.				
Literature	None				
Form of teaching	Industrial internship (14 weeks)				
Assessment method	Written report (min. 10 p.) and oral presentation (20 min.)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Completion of Basic Internship				
Requirements for receiving credit points	Confirmation of participation in the internship, Acceptance of the written report, participation in the seminar

ENVE401 – AIR POLLUTION

Module title	Air Pollution			Module code	ENVE401
Duration	1 semester	Semester	Fall	Module start	7 th
Credit points	6 CP	Workload	180 h	Contact hours	60 h
				Individual study	120 h
Module coordinator	Prof. G. Gantuya			Language	English
Contents	This course is aimed to provide air pollution covering a wide range of topics for students to understand effects of air pollution on human beings, materials and the environment, sources, monitoring techniques, and data analysis. Specific topics are listed below. • Emissions of pollutants • Impact of health and environment • Measurement and monitoring of air pollutants • Air pollution modeling • Pollution control techniques • Air pollution legislation, standards. The module includes a case study on air pollution in Ulaanbaatar, which consists of the emission inventory, monitoring of air quality, data analysis, and interpretation.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe types of air pollution 2. Assess the air quality 3. Calculate air quality index 4. Calculate emission 5. Develop and carry out simple measurement campaigns. 6. Choose adequate techniques for air pollution control.				
Literature	1. US EPA: Emissions Factors & AP 42, Compilation of Air Pollutant Emission Factors; https://www3.epa.gov/ttnchie1/ap42/; 2016. 2. Baumbach G. Air Pollution Control, Springer; 1996. 3. Mycock JC, Kenna JD, Theodore L. Handbook air pollution control engineering and technology, CRC Press; 1995.				
Form of teaching	Lecture (2 Uol) Recitation (2 Uol) Field trip (1 Uol)				
Assessment method	Written examination (60 min.) and academic performance				
Associated study program	B.Sc. Environmental Engineering				
Prerequisites for participation	Completion of all modules in physics and chemistry is recommended				
Requirements for receiving credit points	Passing the module				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

Grading system	The final grade consists of the academic performance during the module, accounting for 60%, and the module examination accounting for 40%.

ENVE402 – WATER SUPPLY

Module title	Water Supply			Module code	ENVE402
Duration	1 semester	Semester	Fall	Module start	7 th
Credit points	8 CP	Workload	240 h	Contact hours	72 h
				Individual study	168 h
Module coordinator	Dr. Ts. Ariuntuya			Language	English
Contents	Basic principles: • Legal and administrative principles of water supply, water extraction and delivery (country-specific, international). • Quality of ground water and surface water. • Water protection zones. • Water balance equation, water consumption and water resources. • Water catchment systems, plants for groundwater enrichment, dimensioning of water pipework, and water pumping equipment. • Water storage: • Construction, arrangement and designing of water reservoirs. Water distribution: • Forms and designs of water supply networks. • Water treatment: • Introduction. • Fields of application of the various water treatment processes subdivided according to raw water types. • Flocculation and precipitation. • Rapid filtration, sedimentation, flotation, filtration, and membrane processes. • Carbon dioxide in drinking water: principles of the lime / carbon dioxide balance - De-acidification/softening/desalination. • Removal of iron and manganese. • Disinfection. Water quality management for drinking water reservoirs: • Limnological principles of standing water. • Catchment area management. • Management of reservoirs. • Treatment of raw water from reservoirs. • Water body restoration. • Reservoir operation and maintenance. • Maintenance strategies in water supply and their implementation (especially reduction of water losses, electronic data-processing applications in water supply etc.), carrying out design tasks. • Application and consolidation of the lecture Contents by working unassisted in groups on specific design tasks. This course includes the following practical/laboratory work: • Sampling strategies for raw and drinking water. • Microbiological quality of raw and drinking water.				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

	Physico-chemical quality of raw and drinking water (e.g. pH, EC, BOD/COD, nutrients, Cl, main elements).
Learning outcomes	On successful completion of this module, the students should be able to: - Describe the legal requirements for raw water quality and drinking water quality in water supply. - Explain technical processes used for water supply, including their interlinkages with water purification. - Calculate and evaluate unassisted the sizing and design of plants for water extraction and distribution. - Recall the country-specific and international legal requirements for raw water quality and drinking water quality as they relate to drinking water supply. - Explain the technical processes in water treatment, and their interlinkages - Calculate and evaluate unassisted the sizing and design of plants for water treatment. - Analyze the operation and maintenance of plants for water supply (maintenance strategies, reduction of water losses, etc.). - Develop a sampling strategy and apply analytical methods for detecting pollutants in raw and drinking water.

Form of teaching	Lecture (2 Uol) Recitation (2 Uol) Field trip/Laboratory (2 Uol)
Assessment method	Written examination (120 min.) and academic performance (including lab report)
Associated study program	B.Sc. Environmental Engineering
Prerequisites for participation	Principles of Water Technology recommended.
Requirements for receiving credit points	Passing the module
Grading system	The final grade consists of the academic performance during the module, accounting for 40%, and the module examination accounting for 60%.

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

STWR401 – SCIENTIFIC WRITING

Module title	Scientific Writing			Module code	STWR401
Duration	1 semester	Semester	Fall	Module start	7
Credit points	4 CP	Workload	120 h	Contact hours	24 h
				Individual study	96 h
Module coordinator	Prof. G. Gantuya			Language	English
Contents	This module instructs the basics required for the scientific writing and publishing of project works and bachelor theses, and for producing reasonable presentations for conferences, seminars, etc.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Utilize the principles of scientific writing. 2. Competently recapitulate issues. 3. Carry out literature research. 4. Grasp didactically prepared mediation. 5. Give and assess verbal presentations. 6. Apply moderation techniques.				
Literature	None				
Form of teaching	Recitation (2 UoI)				
Assessment method	Homework, Project work, Presentations				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None				
Requirements for receiving credit points	Passing the module				
Grading system	Pass / Fail				

ENVE403 – SOLID WASTE TECHNOLOGIES

Module title	Solid Waste Technologies			Module code	ENVE403
Duration	1 semester	Semester	Spring	Module start	8 th
Credit points	6 CP	Workload	180 h	Contact hours	60 h
				Individual study	120 h
Module coordinator	Dr. S. Enkhjargal			Language	English
Contents	This course introduces students to technical options used for the treatment and deposition of solid waste, including the following aspects: • Legal and administrative principles of municipal solid waste (MSW) management (country-specific and international). • Waste management • Classification of waste according to its hazard level. • Composition of municipal waste • Functional elements: waste generation, storage, collection, transfer and transport, processing and recovery, disposal. • Landfilling: site management, basic compaction and dewatering of landfills, surface compaction systems and degassing of landfills, monitoring and aftercare of landfills. • Composting: types, process description, technologies, practice. • Process for waste treatment (thermal, biological, mechanical). • Waste storage – boundary conditions and multi-barrier concept.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Understand concepts of waste management. 2. Describe waste logistics and the processes for waste handling and disposal. 3. Identify the quality of waste based on analyses. 4. Calculate and describe unassisted the sizing and design of systems for collecting valuable materials, residue and harmful materials. 5. Select composting methods and technologies from organic waste. 6. Assess the construction and operation of plants for waste handling, and waste disposal.				
Literature	1. Pichtel J. Waste Management Practices. CRC Press; 2014. 2. Azcue JM. Environmental Impacts of Mining Activities. Emphasis on Mitigation and Remedial Measures. Springer; 2011. 3. Form of teaching	Lecture (2 UoI) Recitation (2 UoI) Field trip (1 UoI)				
Assessment method	Written examination (90 min) and academic performance				
Associated study program	B.Sc. Environmental Engineering				
Prerequisites for participation	Raw Materials and Recycling, Principles of Water Management				
Requirements for receiving credit points	Passing the module				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

Grading system	The final grade consists of the academic performance during the module, accounting for 30%, and the module examination accounting for 70%
-----------------------	---

ENVE404 – ENVIRONMENTAL MODELLING

Module title	Environmental Modelling			Module code	ENVE404
Duration	1 semester	Semester	Spring	Module start	8 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. G. Gantuya			Language	English
Contents	A complex interaction of physical, chemical, and biological processes significantly results in environmental problems. This course addresses the major steps in the development of earth system models. Topics include: - Fundamentals of environmental modelling and mathematical quantification - Complexity and limitations in modeling - Numerical methods for solution of mathematical equations - Coupling of different types of models for environmental problems - Model validation and analysis.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Recognize idea, methodology, and basic tools of environmental modeling. 2. Clarify different modeling approach, and their limitations. 3. Assess and distinguish different methods. 4. Employ conceptual modelling on practical examples 5. Solve environmental problems using numerical methods.				
Literature	1. Gray WG, Gray GA. Introduction to Environmental Modeling. Cambridge University Press; 2016. 2. Holzbecher E. Environmental Modeling Using Matlab. Springer; 2012. 3. Peng G, Leslie LM, Shao Y. Environmental Modelling and Prediction. Springer; 2001.				
Form of teaching	Lecture (2 UoI) Recitation/Laboratory (2 UoI)				
Assessment method	Written examination (60 min), project presentation, and academic performance.				
Associated study program	B.Sc. Environmental Engineering				
Prerequisites for participation	Algorithms and Programming, Climate Change, Air Pollution				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 60% and the module examination accounting for 40%.

Environmental Engineering, incl. Study Plan and Module Handbook

PROJ401 – FINAL STUDY PROJECT

Module title	Final Study Project			Module code	PROJ401
Duration	1 semester	Semester	Spring	Module start	8 th
Credit points	6 CP	Workload	180 h	Contact hours	54 h
				Individual study	126 h
Module coordinator	Prof. M.Hampe			Language	English
Contents	Students from different engineering disciplines will work as a team on a current research topic. Through the module students will learn and practice: Soft skills to cooperate. Brainstorming to find a solution. Formulate engineering problems. Problem solving procedures. Application of engineering knowledge for solution. Computation of initial and life cycle cost of system.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Solve a design task with the help of systems engineering. 2. Recognize and specify complex problems occurring in industrial practice. 3. Ascertain and evaluate variants within a team solution. 4. Carry out the main features of an exact time and work schedule team, repeatedly, if necessary. 5. Perform different roles in a team. 6. Represent and assess divergent positions, and develop a problem solution.				
Literature	The literature for this module depends on the project and will be provided by the program coordinators.				
Form of teaching	Project course (2-week interdisciplinary project work, and 1-day field trip), supervised by lecturers of all disciplines involved.				
Assessment method	Written report and oral presentation				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	None

Environmental Engineering, incl. Study Plan and Module Handbook

THES401 – BACHELOR THESIS + COLLOQUIUM

Module title	Bachelor Thesis + Colloquium			Module code	THES401
Duration	1 semester	Semester	Spring	Module start	8 th
Credit points	12 CP	Workload	360 h	Contact hours	
				Individual study	360 h
Module coordinator	Supervisors			Language	English
Contents	Current research topics from the general research area of the administering institute.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Solve scientific questions in a structured manner using engineering science methods. 2. Critically differentiate between various solutions. 3. Present their results in written and oral form in a scientifically acceptable manner.				
Literature	Depends on topic				
Form of teaching	Thesis supervision				
Assessment method	Written thesis (14 weeks handover deadline) and a colloquium (20 min talk followed by a discussion)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Possible prerequisites will be prescribed by the individual institute supervising the thesis. At least 171 credit points must have been earned.				
Requirements for receiving credit points	Passing the thesis and the presentation				
Grading system	The final grade for the Bachelor thesis consists of the grade of the thesis and of the grade of the performance in the colloquium with a weighting of 4:1 provided that the thesis grade was rated at least as “passed”.

Environmental Engineering, incl. Study Plan and Module Handbook

ENGINEERING ELECTIVE MODULES

ENSS150 – ENGINEERING SUMMER SCHOOL

Module title	Engineering Summer School			Module code	ENSS150
Duration	2 weeks	Semester	Fall or Spring	Module start	2 nd
Credit points	3 CP	Workload	90 h	Contact hours	60 h
				Individual study	30 h
Module coordinator	Dr. T. Narangarav			Language	English
Contents	Interdisciplinary summer school with reference to GMIT's profile consisting of lab work, excursions, field trips and lectures. The following topics will be covered: • Engineering, especially in the context of the resource industry • Environmental aspects of industrial activities • Mining & industry in Germany • Geology • Intercultural competence & self-organization • Higher education institutions and student life abroad The Summer school is accompanied by social events that enforce intercultural contacts.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Explain the general function of industrial or scientific processes covered and the interaction of different processes with another. 2. Identify different materials and their properties and explain their uses in the industrial processes observed. 3. Explain the difference between open pit and underground mining and of the difference technology in use. 4. Describe impacts on the environment and health along the added value chain of natural resources. 5. Perform different activities which are part of mining engineering, such as loading, drilling etc. 6. Identify minerals and rocks and explain their properties 7. Identify different periods in German history, to compare with Mongolian history and to evaluate the impact of historical developments on the present 8. Apply presentation skills				
Literature	None				
Form of teaching	Lab work, excursion, field trip, lectures				
Assessment method	Report, presentation on major program points				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Open to 1st year students, in exceptional cases, students of other semesters are eligible, selection criteria, e.g. academic performance, motivation, personal qualification				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

Requirements for receiving credit points	Attendance of all parts of the program and successful completion of module
Grading system	Pass / Fail. Final report and presentation accounting for 50% each.

ENSS151 – ENGINEERING SUMMER SCHOOL

Module title	Engineering Summer School			Module code	ENSS151
Duration	4 weeks	Semester	Fall or Spring	Module start	4 th
Credit points	3 CP	Workload	90 h	Contact hours	60 h
				Individual study	30 h
Module coordinator	German Professors (TDB)			Language	English
Contents	Interdisciplinary summer school consisting of lectures, recitations, lab works, excursions and intercultural activities. The following topics will be covered: • Introduction to mining safety engineering • Mining & industry in China • Geology • Culture and language • Modern coal mining technology The Summer school is accompanied by social events that enforce intercultural contacts.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Recognize the work process in the mining area and its social and technical aspect. 2. Assess career prospects in the business. 3. Explain the general function of industrial or scientific processes covered and the interaction of different processes with another. 4. Identify different materials and their properties and explain their uses in the industrial processes observed. 5. Explain underground mining and of the difference technology in use. 6. Describe impacts on the environment and health along the added value chain of natural resources. 7. Identify different periods in Chinese history, to compare with Mongolian history and to evaluate the impact of historical developments on the present. 8. Apply skills in writing of reports and essays.				
Literature	None				
Form of teaching	Lab work, excursion, field trip, lectures				
Assessment method	Report, presentation on major program points				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Open to 2nd year students, in exceptional cases, students of other semesters are eligible, selection criteria, e.g. academic performance, motivation, personal qualification.

Environmental Engineering, incl. Study Plan and Module Handbook

PROG151 – MATLAB PROGRAMMING

Module title	Matlab programming			Module code	PROG151
Duration	1 semester	Semester	Fall or Spring	Module start	5 th , 6 th , 7 th , 8 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Prof. G. Gantuya			Language	English
Contents	This course aims to introduce the elements and practicalities of computer programming through the MATLAB mathematical computing environment. This course comprises the following topics: - MATLAB introduction and environment - Variables, data types and operators - Vectors and matrices - Selection statements - Loop statements - Script and function - Plotting and colour maps - String manipulation - Data structures - File input/output - GUI introduction				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Become familiar with MATLAB environment 2. Understand the fundamentals of programming 3. Manipulate vectors, matrices and strings 4. Use built-in commands and mathematical functions to make calculation 5. Solve simple problems using selection and loop statements 6. Create and call user-defined functions 7. Draw various types of graphics 8. Design and construct data structures when required 9. Read/write data from/to files to manipulate 10. Develop program with simple GUI				
Literature	1. Attaway S. MATLAB: A practical Introduction to Programming and Problem Solving, 3rd Ed. Elsevier; 2013. 2. Lent CS. Learning to program with MATLAB, 1st Ed., Wiley; 2013.				
Form of teaching	Lecture (1 UoI) Laboratory (3 UoI)				
Assessment method	Written examination (90 min) and academic performance.				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronics Engineering				
Prerequisites for participation	Algorithm and Programming				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

Requirements for receiving credit points	Passing the module
Grading system	The final grade consists of the academic performance during the module accounting for 70% and the module examination accounting for 30%.

ENVE308 – ENVIRONMENTAL CHEMISTRY

Module title	Environmental Chemistry			Module code	ENVE308
Duration	1 semester	Semester	Fall	Module start	5 th , 7 th
Credit points	4 CP	Workload	120 h	Contact hours	48 h
				Individual study	72 h
Module coordinator	Dr. T. Narangarav			Language	English
Contents	This course provides a broad overview of chemistry of air, water, and toxic organic compounds as well as how anthropogenic activities affect this chemistry on planet Earth. Specifically, students examine the sources, reactions, transport, effects, and fates of chemical species found in air and water as well as the effects of technology thereon. Topics include atmospheric chemistry and air pollution, greenhouse effect, basic concepts of water chemistry and water pollution, understanding of toxic organic compounds including heavy metals, pesticides, dioxins, furans, and PCBs, environmental and pollution control, environmental laws and management.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Gain a general understanding of environmental chemistry. 2. Express an understanding of the chemicals and their effects on the environment. 3. Explain the contaminants and their interactions with land, biota and climate change. 4. Investigate policies toward chemicals in the environment. 5. Recognize and evaluation pollution reduction technologies.				
Literature	1. Manahan SE. Environmental chemistry. CRC press; 1999. 2. Winfield A. Environmental chemistry. Cambridge University press; 1995.				
Form of teaching	Lecture (2 UoI) Recitation/Laboratory (2 UoI)				
Assessment method	Written examination (90 min), project presentation, and academic performance.				
Associated study program	B.Sc. Environmental Engineering				
Prerequisites for participation	Chemistry, Introduction to Geosciences				
Requirements for receiving credit points	Passing the module				
Grading system	The final grade consists of the academic performance during the module accounting for 60% and the module examination accounting for 40%.				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

ENVE405 – LAND REMEDIATION

Module title	Land Remediation			Module code	ENVE405
Duration	1 semester	Semester	Fall or Spring	Module start	7 th , 8 th
Credit points	4 CP	Workload	120 h	Contact hours	36 h
				Individual study	84 h
Module coordinator	Dr. S. Enkhjargal			Language	English
Contents	This module aims to provide an introduction to the technical and economic principles of lifecycle economy, assessment of contaminated site, remediation and management plan of contaminated sites. <i>Contaminated sites:</i> Definitions, legal principles, mechanisms for dispersal of pollutants, protection of the working environment. <i>Detection:</i> Sampling, detection procedures for contaminated sites, evaluation, general classification values. <i>Safety and sanitisation:</i> Sanitisation investigations, sanitisation and sanitisation monitoring, sanitisation procedures, decontamination procedures, natural attenuation, revitalisation. <i>Examples:</i> Types of sites				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Describe the mechanisms for determination and dispersal of pollutants. 2. Describe and analyse the technical relationships and the differences between free and regulated markets as well as the controlling function of the legal system in recycling and the remediation of contaminated sites. 3. Consolidate the knowledge that they have gained by independent practical work. 4. Reflect their knowledge and experiences by giving presentations on complex technical/economic/legal matters. 5. Making an appropriate remediation plan for specific cases of contamination. 6. Apply safety and sanitisation methods for the cases.

Environmental Engineering, incl. Study Plan and Module Handbook

LANGUAGE ELECTIVE MODULES

ENGL010 – ENGLISH

Module title	English C1			Module code	ENGL010
Duration	1 semester	Semester	Fall	Module start	BEP, 1 st
Credit points		Workload		Contact hours	96 h
				Individual study	
Module coordinator	Prof. Ch. Gunpilmaa, D. Suvdanchuluun			Language	English
Contents	Grammar Syllabus: Gerund/ infinitive, the present and stative verbs, used to and would, passive, causative, future, conditionals and wishes, inversion, modal verbs, relatives, indirect speech and reporting verbs, articles and punctuation Vocabulary and Topical Syllabus: ambition, career success, pastimes and hobbies, family, media, social problems, technology, science jobs, health problems, school, college, university, advertising, communication				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Express themselves clearly and talk about complex facts in a structured and detailed way. 2. Write correctly to a large degree on a number of complex topics. 3. Follow and grasp different kinds of spoken language, live or broadcast 4. Read with ease complex texts and summarize correctly and concisely written texts and oral presentations in their own words. 5. Deliver a presentation using a clear organized structure, helpful slides, and signposting 6. Integrate their reading, writing, and speaking skills to promote creative thinking and independent learning				
Literature	1. Dooley VE, Edwards L. Upstream Advanced C1, Express Publishing; 2005. 2. Evans V, Edwards L, Dooley J. Upstream Advanced C1, Workbook, Express Publishing; 2005.				
Form of teaching	Recitation (14 Uol in BEP, 8 Uol in 1st Semester in B.Sc. Programs)				
Assessment method	(70%) = Final examination (written and oral) (30%) = Short presentations, in-class assignments, quizzes,mid-term exam				
Associated study program	BEP / 1 st Semester of Bachelor programs				
Prerequisites for participation	Participants must have successfully completed level B2 or have a comparable knowledge of English				
Requirements for receiving credit points	1. 80% attendance 2. Academic performance 3. Final examination : written and oral examination 4. Students who failed the exam in the first semester may retake the module in the second semester				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

ENGL150 – ACADEMIC WRITING I

Module title	Academic Writing, I			Module code	ENGL150
Duration	1 semester	Semester	Fall and Spring	Module start	1 st , 2 nd , 3 rd , 4 th , 5 th , 6 th
Credit points	3 CP	Workload	90 h	Contact hours	48 h
				Individual study	42 h
Module coordinator	D. Suvdanchuluun			Language	English
Contents	The goal of this module is to offer an introduction to formal writing to the undergraduates which is required in their academic studies at the university. The objectives of the module are to familiarize learners with a formal tone, use of the third-person rather than first-person, focus on the topic, precise word choice on the one part, and to introduce them with a paragraph and essay structures, unity and coherence, outlines, first and second drafts and editing on the other part. The goal and objectives will be achieved by offering the below-mentioned syllabus: • Paragraphs • The five-paragraph essay • Unity within a paragraph and within an essay • Coherence • Brainstorming and making outlines • Drafts and editing • Descriptive essays • Formal emails • CV and motivation or cover letters • Process Analysis Essays • Cause and Effect Essays • Argumentative Essays • Opinion Essays • Reports • Lab report discussions • Reviews				
Learning outcomes	On successful completion of this module, the students should be able to: 5. Recognize, understand and recall the structural components of academic writing at paragraph and essay levels. 6. Identify and apply formal register and tone. 7. Analyze and evaluate different types of academic writing, e.g. essays, reviews and reports. 8. Summarize the main points of academic texts in writing. 9. Organize and present arguments in a logical fashion. 10. Apply cohesive devices. 11. Create their own pieces of academic writing. 12. Critically examine and improve upon their own writing. 13. Apply the skills acquired in the module to their further academic studies.

Environmental Engineering, incl. Study Plan and Module Handbook

Form of teaching	Recitation (4 Uol)
Assessment method	Assignments: written and oral in the form of essays or presentations
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering
Prerequisites for participation	C1 English level
Requirements for receiving credit points	Passing the module.
Grading system	Continuous assessment (presentations and essays): Pass or Fail

MNGL150 – MONGOLIAN STYLISTICS

Module title	Mongolian Stylistics			Module code	MNGL150
Duration	1 semester	Semester	Fall and Spring	Module start	1 st , 2 nd , 3 rd , 4 th ,
Credit points	2 CP	Workload	60 h	Contact hours	24 h
				Individual study	36 h
Module coordinator	D. Suvdanchuluun			Language	English
Contents	Participants will read texts of different genres, discuss text comprehension and analyze how the texts are structured and which stylistic means, grammatical structures and vocabulary are used. Grammar and spelling rules will be revised. Participants will practice text analyses, summaries and, furthermore, apply their knowledge of style, academic vocabulary and grammar to their own text production. Participants will also learn how to express their thoughts in oral speech, e.g. in discussions and presentations.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Comprehend and analyze texts of different genres and recognize their specific characteristics, 2. Write text summaries, 3. Structure their thoughts in a text 4. Write a formal letter, an application and other short texts as well as an essay with correct grammar, spelling and using appropriate stylistic means 5. Give an academic presentation using appropriate language

HIST150 – EUROPEAN HISTORY

Module title	European History			Module code	HIST150
Duration	1 semester	Semester	Fall	Module start	5 th , 7 th
Credit points	3 CP	Workload	90 h	Contact hours	48 h
				Individual study	42 h
Module coordinator	Robin Charpentier			Language	English
Contents	European Pre-History: Themes, Questions in the Study of History - Time and Space Considerations; How and Why we Study History - Stone Age: Paleolithic and Neolithic Early European Civilization: - Early Bronze Age – The Minoans - Archaic Greece - Classical Greek Period - Hellenistic Culture - Central European Late Iron Age Cultures (Hallstatt, La Tène) - City of Rome to Roman Kingdom/Punic Wars - Formation and Expansion of Roman Empire - The Fall of the Roman Empire Mid-Term Exam Late Antiquity/Early Middle Ages - Nomadic Conquests of Western Roman Empire - Eastern Roman Empire and Byzantium - Holy Roman Empire - Age of Vikings - Muslim Conquests - Holy Wars: The Crusades - The Mongol Conquests in its Western Empire and in Eastern Europe; Pax Mongolica				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Identify factors associated with the major cultural changes that have contributed to and shaped Europeans' distinctive worldview 2. Compare and contrast these factors with relevant time periods in Mongolian history 3. Think critically about: the role and presence/absence of original sources; and about the role of spatiality and time in the creation of an historical record.				
Literature	1. Duiker WJ, Spielvogel JJ. World History 8th edition; 2016. 2. Spielvogel JV. Glencoe World History, Glencoe-McGraw Hill; 2008. 3. Various primary source materials in photocopy				
Form of teaching	Recitation (4 Uol)				
Assessment method	(70%) = Written final examination (30%) = Active in-class participation (15%); tests, mid-term exam, final oral presentation (15%)

GERL151 – GERMAN A1.1

Module title	Deutsch A1.1/ German A1.1			Module code	GERL151
Duration	1 semester	Semester	Fall	Module start	1 st , 3 rd , 5 th , 7 th
Credit points	3 CP	Workload	90 h	Contact hours	48 h
				Individual study	42 h
Module coordinator	B. Batsuren, B. Bolormaa			Language	German
Contents	Basic knowledge and skills in pronunciation, spelling (alphabet), intonation (word and sentence stress) of the German language. Main topics are first contact, classroom language, languages/ countries/ sights, jobs, living, time, numbers, making appointments, how to find the way in the city and in buildings, means of transport. Grammar problems, e.g. sentence structure (statements and questions), present tense of verbs, past tense of “haben” and “sein”, negation, articles, possessive pronoun, use of prepositions (place/time), cardinal numbers, dative and accusative cases, are introduced and practiced. Basic information about German geography and culture is introduced.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Know the basic principles of pronunciation, intonation, spelling of German. 2. Construct grammatically and semantically correct sentences, produce simple statements and questions in oral communication as well as in writing. 3. Introduce themselves and others and make themselves understood in the classroom. 4. Talk about the geographical location of places and say where people work/study and ask for the way. 5. Describe houses/apartments. 6. Tell the time and make appointments. 7. Apply integrated learning strategies to improve upon their learning independently.

Form of teaching	Recitation (4 Uol)				
Assessment method	Written examination (90 min.) and academic performance (tests and homework assignments)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	C1 English level				

ACA-PO-021-v1.1-EN-Program Specific Study and Exam Regulations for B.Sc. in
Environmental Engineering, incl. Study Plan and Module Handbook

Requirements for receiving credit points	Passing the module
Grading system	The final grade consists of the academic performance during the module (30%) and the module examination (70%).

GERL152 – GERMAN A1.2

Module title	Deutsch A1.2/ German A1.2			Module code	GERL152
Duration	1 semester	Semester	Spring	Module start	2 nd , 4 th , 6 th , 8 th
Credit points	3 CP	Workload	90 h	Contact hours	48 h
				Individual study	42 h
Module coordinator	B. Batsuren, B. Bolormaa			Language	German
Contents	Basic knowledge and skills in pronunciation, spelling, grammar and vocabulary of the German language as well as basic aspects of German culture. The main topics include: food/shopping, professions, daily routine/everyday life, holidays, seasons/weather, fashion, the human body/health. Grammar points include: modal verbs, perfect tense, comparison, adjectives, imperative and personal pronouns. In this module A1 (beginner) level is completed.				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Pronounce and spell German words and intone sentences correctly. 2. Construct grammatically and semantically correct sentences and make simple statements in oral communication as well as in writing. 3. Understand simple everyday conversation and short and simple oral material. 4. Talk about professions, clothes, the weather, the human body, feelings, food, holidays and daily routines. 5. Give recommendations and write simple letters. 6. Understand weather forecasts, recipes and various other short texts of different genres. 7. Provide basic facts about Germany and German culture. 8. Apply integrated learning strategies to improve upon their learning independently.				
Literature	1. Paar-Grünbichler F, Finster WKJ. Panorama. Deutsch als Fremdsprache. Kursbuch A1 und Übungsbuch A1, Cornelsen Verlag; 2018. 2. Funk K. Studio 21. Das Deutschbuch. A1.1, Cornelsen Verlag; 2013.				
Form of teaching	Recitation (4 UoI)				
Assessment method	Written examination (90 min.) and oral examination (15 min.) as well as academic performance (tests and homework assignments)				
Associated study program	B.Sc. Mechanical Engineering B.Sc. Raw Materials and Process Engineering B.Sc. Environmental Engineering B.Sc. Industrial Engineering B.Sc. Energy and Electrical Engineering B.Sc. Mechatronic Engineering				
Prerequisites for participation	Successful completion of the module German A1.1 or equivalent knowledge of German				
Requirements for receiving credit points	Passing the module

GERL251 – GERMAN A2.1

Module title	Deutsch A2.1/ German A2.1			Module code	GERL251
Duration	1 semester	Semester	Fall	Module start	1 st , 3 rd , 5 th , 7 th
Credit points	3 CP	Workload	90 h	Contact hours	48 h
				Individual study	42 h
Module coordinator	B. Batsuren, B. Bolormaa			Language	German
Contents	This module will pursue further work to improve students' skills in pronunciation and spelling as well as grammar and vocabulary. Language tasks will include: talking about one's self and one's family, describing people and pictures, extending invitations and congratulating people, expressing one's opinion, talking about trips and one's hobbies, describing one's emotions, discussing advertisements and the media, ordering food in a restaurant and explaining one's leisure time activities The grammar points covered in this module include: subordinate clauses with <i>weil</i>, <i>dass</i>, and <i>ob</i> comparative and superlative adjectives, possessive article and adjectives in the dative case, the genitive <i>/s/</i>, main clauses with <i>aber</i> and <i>oder</i>, the modal verb <i>sollen</i>, reflexive pronouns, adverbs of time, verbs with prepositions, indefinite pronouns, personal pronouns in the dative case. Further understanding of aspects of German culture				
Learning outcomes	On successful completion of this module, the students should be able to: 1. Apply their knowledge of German pronunciation, intonation and spelling to new words and sentences. 2. Construct grammatically and semantically correct sentences at a basic level. 3. Use proper vocabulary to discuss topics such as family, biography, languages, travelling, leisure and media. 4. Produce written texts that go beyond the sentence level. 5. Interact successfully and appropriately in everyday oral communication. 6. Understand short oral texts. 7. Grasp the meaning of various short written texts. 8. Describe in more detail many aspects of German culture (e.g. migration, literature, geography). 9. Apply integrated learning strategies to improve upon their learning independently				
Literature	1. Paar-Grünbichler F, Finster WKJ. Panorama. Deutsch als Fremdsprache. Kursbuch A1 und Übungsbuch A1, Cornelsen Verlag; 2018. 2. Funk K. Studio 21. Das Deutschbuch. A1.1, Cornelsen Verlag; 2015.
